## I. Qualifications

1. I am a data scientist with over 15 years of practical work experience in the field, including teaching, speaking, and publishing. I am the co-founder of MK Analytics, Inc., a consulting firm that assists non-profits, government entities, and law firms in implementing and conducting data-driven initiatives, investigations, and analyses. Before founding MK Analytics, I founded the Research and Analytics Department at the New York State Office of the Attorney General, the first of its kind in the nation, leading a team that employed cutting-edge data analysis in high-profile cases. I am an adjunct professor at Washburn University, where I co-teach the capstone project course and an introductory course on data information systems, analysis, and database management. I have so far published nearly a dozen works and delivered over two dozen speaking engagements related to Data Mining and Analysis, including guest lecturing at Washburn University School of Business, Brooklyn Law School, Columbia Law School, Yale Law School, and the University of Missouri School of Accountancy. I hold a Master of Economics from the New School and a Bachelor of Business Administration from Washburn University. Keller Report Appendix C outlines my full professional history, prior depositions and trial testimonies, and compensation on this matter.
2. My opinions are held to a reasonable degree of professional certainty and are based on my professional experience and training, as detailed in Keller Report Appendix C of this report, as well as consideration of publicly available data and information in addition to documents and data produced in this litigation, as described in the Materials Considered portion of my report. The staff that worked under my direction had full and complete access to the documents and data noted in my Materials Considered (Keller Report - Appendix G). I have provided all of my source code, including scripts, queries, and other materials related to my analysis.
3. My analysis and the opinions in my report considered the data that Uber produced in this litigation as of September 12, 2025. I understand that data may still be produced, including data and fields from the Flack system, as well as data and/or documents related to S-RAD, and data and/or documents related to Bellwether-specific plaintiffs or drivers. I reserve the right to amend or supplement the facts and opinions upon

which I am expected to testify as additional data and information are made available.

## II. Assignment

4. Plaintiffs' counsel asked me to review documents and data produced in this litigation to calculate the number of, rates of, and trends related to Sexual Assault and Sexual Misconduct Incidents reported to Uber between 2017 and 2024,<sup>1</sup> as well as Uber's investigations of those incidents and Uber's communications about the incidents in Uber's U.S. Safety Reports. More specifically, Plaintiffs' counsel asked me to analyze the number of and compare Sexual Assault and Sexual Misconduct Incidents that Uber:
  - 4.1. Disclosed in Uber's U.S. Safety Reports released for 2017-2018, 2019-2020, and 2021-2022 (collectively referred to in this report as "Uber's U.S. Safety Reports");<sup>2</sup>
  - 4.2. Tabulated from its Bliss and Jira systems in response to interrogatories (referred to in this report as "Bliss/Jira Incident Report Classification Data");<sup>3</sup>
  - 4.3. Tabulated from its Flack system in response to interrogatories (referred to in this report as "Flack Incident Report Classification Data").<sup>4</sup>

---

<sup>1</sup> In this report, I use the following terminology to refer to the Sexual Assault and Sexual Misconduct incidents in the data I reviewed: Sexual Assault incidents may be referred to as "SA Incidents," Sexual Misconduct incidents may be referred to as "SM Incidents," and Sexual Assault and Sexual Misconduct incidents may be referred to collectively as "SA/SM Incidents." I provide a complete list of terminology and definitions in Keller Report Appendix B.

<sup>2</sup> "Uber's US Safety Report." Uber.

<https://www.uber.com/us/en/about/reports/us-safety-report/> The US Safety Report covering 2017-2018 was released on December 5, 2019; 2019-2020 was released on June 30, 2022; 2021-2022 was released on August 30, 2024 (Deposition of Katherine McDonald, 4/24/2025, p. 137-139; Deposition of Katherine McDonald, 4/24/2025, Exhibit 3111).

5. Furthermore, Plaintiffs asked me to conduct data analyses related to specific Uber Drivers reported for SA/SM Incidents<sup>5</sup> involving the Bellwether Plaintiffs.<sup>6</sup> I analyzed data that Uber produced related to these Drivers to catalog the type of data and information that Uber collected on Drivers who were reported for SA/SM Incidents. These analyses are detailed in Keller Report Appendix D<sup>[OBJ]</sup>. The same analysis could be applied to any Driver who was reported for a SA/SM Incident. I reserve the right to offer additional Driver analyses related to my opinions in this report.
6. Plaintiffs also asked me to review and analyze data and documents related to Uber's Safety Risk Assessed Dispatch ("S-RAD"), a machine learning algorithm that was developed at Uber by data scientists that "leverages a variety of trip, driver, and rider-level predictors to detect driver-rider matches with elevated risk of sexual assaults."<sup>7</sup>
7. I have included demonstrative charts and images in this report to aid in understanding certain analyses. However, I reserve the right to use different or modified demonstratives at trial as appropriate. I have offloaded high-resolution images and CSV files containing the raw data underpinning each image to Keller Report Appendix E of this report into "Bucket 4" into the AWS Secure Environment.
8. Finally, I include within my report:
  - 8.1. Keller Report Appendix A - Methodology
  - 8.2. Keller Report Appendix B - Definitions
  - 8.3. Keller Report Appendix C - Qualifications and Remuneration
  - 8.4. Keller Report Appendix D - Driver Profiles

### III. Summary of Opinions

- 9. Given my analyses as described herein, my review of documents and data, and my professional experience, I hold the following opinions:
  - 9.1. **Opinion 1: Uber's analyses shows hundreds of thousands of Sexual Assault and Sexual Misconduct Incidents reported in the U.S. from 2017 through 2024.** Uber's analyses showed 546,196 SA/SM Incidents reported from 2017 through 2024. From 2017 through 2024, an SA/SM Incident was reported to Uber at an average frequency of every eight minutes. A Rape<sup>12</sup> or Attempted Rape<sup>13</sup> incident was reported to Uber [REDACTED]. Both the number and rate<sup>14</sup> of Rape incidents [REDACTED]. In 2024, [REDACTED].
  - 9.2. **Opinion 2: Uber's U.S. Safety Reports Disclosed Three Percent of the Sexual Assault and Sexual Misconduct Incident Reports that Uber Received in the U.S. from 2017 through 2022.** Uber acknowledges that it has publicly disclosed 3% of the SA/SM

<sup>10</sup> Provides a historical timeline of the features included in the S-RAD model from the first developed versions through the present.

<sup>11</sup> It is typically my practice to offload my code and data into an AWS S3 bucket (i.e., folder) for production. For Defendants' convenience, I have disclosed through "Bucket 4" all code and any data that I or my team uploaded into the "Bucket 2" ingress. These offloads are timestamped and cannot be deleted by Plaintiffs. Pursuant to the agreement between Uber and Plaintiffs' Counsel, I am not re-producing data that Uber had uploaded in "Bucket 1" back to Uber through "Bucket 4," including the SA/SM Incident Data, Interrogatory No. 28, Interrogatory No. 16/29, and Interrogatory No. 16/29 Addendum.

<sup>12</sup> Defined in Keller Report Appendix B.

<sup>13</sup> Defined in Keller Report Appendix B.

<sup>14</sup> Defined as the number of SA/SM Incidents divided by the Number of Completed Rides Trips in the United States (see: Interrogatory No. 23).

Incidents reported from 2017 through 2022.<sup>15</sup> Uber's U.S. Safety Reports disclosed the number of SA/SM Incidents in the five Subcategories that Uber referred to publicly as the "most serious."<sup>16</sup> However, Uber tracked SA/SM Incident reports and categorized them into Uber's Sexual Violence and Sexual Misconduct Taxonomy that contains 21 subcategories. In total, Uber's analyses show that Uber received reports of 392,828 SA/SM Incidents from 2017 through 2022 in all Subcategories, including [REDACTED] that Uber categorized into Subcategories that Uber classified as "Serious SA/SM" but did not include in its Safety Reports. Uber's U.S. Safety Reports disclosed 12,522 SA/SM Incidents for those same years. Uber's analyses also showed that it received 153,368 SA/SM Incident reports from 2023 through 2024 [REDACTED] in the 13 Subcategories that Uber classified as "Serious SA/SM"). Considering the SA/SM Incidents from 2023 through 2024, Uber has currently disclosed 2.3%<sup>17</sup> of all SA/SM Incidents from 2017 through 2024, or [REDACTED] of the SA/SM Incidents that Uber referred to internally as "Serious SA/SM."

- 9.3. **Opinion 3: Uber Analyzed "Precursors"<sup>18</sup> to Sexual Assault and Sexual Misconduct Incidents, Which It Did Not Disclose in U.S. Safety Reports.** Uber's internal documents indicate that Uber analyzed certain trends, patterns, and "precursors" and their correlation with increased rates of SA/SM incidents, including: the day of week and time of day of the trip; the proximity to bars; opposite gender Driver-Rider pairings; prior SA/SM reports, "Feedback tags"; and factors related to the timing of deactivation.<sup>19</sup> Based on my review of the Flack fields list in Todd Gaddis' August 18, 2015 Declaration and my review of documents and testimony in

<sup>15</sup> In response to an August 6, 2025 New York Times article, (<https://www.nytimes.com/2025/08/06/business/uber-sexual-assault.html>), Uber stated that the incidents it disclosed were limited to the "3% most serious." ("Uber's record on safety is clear." Uber Newsroom, <https://www.uber.com/newsroom/ubers-safety-record/>).

<sup>16</sup> Uber's U.S. Safety Reports 2017-2018, 2019-2020, and 2021-2022.

<sup>17</sup>  $12,522 / 546,196 = 2.3\%$ .

<sup>18</sup> UBER\_JCCP\_MDL\_000356814.

<sup>19</sup> UBER000204698; UBER\_JCCP\_MDL\_001755017; UBER\_JCCP\_MDL\_003504225; UBER\_JCCP\_MDL\_000258366; UBER\_JCCP\_MDL\_002249692; UBER\_JCCP\_MDL\_000031720; UBER\_JCCP\_MDL\_00330668; UBER\_JCCP\_MDL\_000964270; UBER\_JCCP\_MDL\_000014232; August 25, 2025 Deposition of Greg Brown, Exhibit 1932

this case, it appears that Uber maintains data sufficient to analyze these trends and patterns. However, the SA/SM Incident Data data as produced appears incomplete and contains inconsistencies. To run analyses of these patterns and trends using the SA/SM Incident Data, I would need to use my professional judgment to address gaps and inconsistencies. It is more appropriate to conduct my analyses on data that is as complete and accurate as possible and I reserve the right to supplement my analyses pending the outcome of the request, whether or not the additional data is produced.

- 9.4. **Opinion 4: Uber cultivated a data-rich environment from its founding, and implemented a machine learning algorithm nearly a decade later to “prevent sexual assaults.”**<sup>20</sup> When Uber dispatches a Driver to a Rider, S-RAD is the only way Uber takes into account, and attempts to reduce, the risk of SA/SM Incidents.<sup>155</sup> Since Uber deployed S-RAD in 2022, Uber has applied S-RAD at a [REDACTED] for all U.S. trips “in aggregate.”<sup>21</sup> In other words, approximately [REDACTED] of Uber trips are not evaluated as to the risk of possible SA/SM Incidents.
- 9.5. **Opinion 5: I confirmed that Uber collected data and information on the Drivers of the Bellwether trips and the Bellwether incidents.** I observed that this data resembled the information in other documents and data produced. For example, Drivers like Hassan Turay had two prior SA/SM Incidents that occurred prior to the Plaintiff’s trip on November 15, 2023.<sup>22</sup>

#### IV. Materials Considered

10. The sections below discuss the datasets and documents that I considered in writing this report and forming my opinions.

##### A. Uber’s Internal Documents

11. I reviewed documents Uber produced in this litigation in forming my opinions for this report. I had complete access to documents produced in

<sup>20</sup> UBER JCCP MDL 001144266; UBER JCCP MDL 001101922; UBER\_JCCP\_MDL\_003306684; UBER\_JCCP\_MDL\_001730324; UBER\_JCCP\_MDL\_003224079.

this litigation through Everlaw. Keller Report Appendix A provides more information on the document review and considered items process. The Bates numbers for all considered items have been provided in Keller Report Appendix G.

### B. Uber's U.S. Safety Reports

12. Uber has published three Uber U.S. Safety Reports covering the years 2017-2018, 2019-2020, and 2021-2022. The reports were released as follows: 2017-2018 on December 5, 2019; 2019-2020 on June 30, 2022; and 2021-2022 on August 30, 2024.<sup>23</sup> Uber has not issued a report for 2023-2024 as of the date of this report. Uber has never issued a report disclosing SA/SM Incident data for years prior to 2017.<sup>24</sup>

### C. Produced Data

13. I considered the following datasets and related documents produced by Uber, as detailed in the paragraphs below.<sup>25</sup>

#### i. Defendants' Processed Data (Interrogatory Responses & Information Summaries in Rule 30(b)(6) Depositions)

14. **Interrogatories Nos. 1 through 8 ("Bliss/Jira Incident Report Classification Data" and "Flack Incident Report Classification Data" and collectively, "Incident Report Classification")**:<sup>26</sup> In response to Plaintiffs' Interrogatories 1 through 8, on April 17, 2025, April 23, 2025, June 20, 2025, and September 12, 2025, Uber provided tables quantifying the monthly number of SA/SM Incidents reported to Uber from

<sup>23</sup> Deposition of Katherine McDonald, 4/24/2025, p. 137-139; Deposition of Katherine McDonald, 4/24/2025, Exhibit 3111.

<sup>24</sup> July 8, 2025 Deposition of Todd Gaddis, p. 18.

<sup>25</sup> There are additional analyses pertinent to my opinions that I could perform using each data source identified in this section, however, those analyses also involve the SA/SM Incident data and, as described below, it is more appropriate to conduct my analyses on data that is as complete and accurate as possible. I reserve the right to supplement my analyses pending the outcome of the request for data from Flack, whether or not the additional data is produced.

<sup>26</sup> Interrogatories 1 through 8 asked Uber to specify the number of Sexual Assault and Sexual Misconduct Incidents that Uber categorized into each Subcategory in Uber's Sexual Assault and Sexual Misconduct Taxonomy for every month from 2017 through 2024 (Defendants Uber Technologies, Inc., Rasier LLC and Rasier-CA, LLC's Amended Responses to Plaintiffs' Second Set of Interrogatories, 5/1/2025, In Re: Uber Technologies, Inc., Passenger Sexual Assault Litigation, Case No. 23-md-03084-CRB (hereinafter "Amended Responses"), p. 5-11).

2017-2024 by incident category and subcategory. The April 17, 2025 document is titled “Information Provided by Defendants Pursuant to the Parties’ Agreement, Dated April 4, 2025.” The April 23, 2025 document is titled “Supplemental Information Provided by Defendants Pursuant to the Parties’ Agreement, Dated April 4, 2025.” The June 20, 2025 document was titled “Incident Report Classification for 2023-2024.” Collectively, I refer to the data in the April 17, April 23, and June 20 documents as “Bliss/Jira Incident Report Classification Data.” The September 12, 2025 document was titled “Incident Report Classification of Dominant Tickets for 2017-2024” and I refer to the data in this document as “Flack Incident Report Classification Data.” Uber’s Bliss/Jira Incident Report Classification Data provided comparable results to the analysis based on the Flack Incident Report Classification Data; however, I analyze the Flack Incident Report Classification Data in this report because Uber did not de-duplicate Bliss/Jira Incident Report Classification Data<sup>27</sup> and

---

<sup>27</sup> In the “In re Uber Technologies, Inc., Passenger Sexual Assault Litigation (Case No.: 3:23-MD-03084 CRB) Information Provided by Defendants Pursuant to the Parties’ Agreement, Dated April 4, 2025” Uber makes the following statement:

*... It is also important to note that this information does not, and cannot, reflect the number of incidents Uber placed into each of the 21 categories because a single incident might be placed into several different categories at different stages during the intake, review, or audit processes—and indeed, a single incident may be reported via more than one reporter, or reporting channel. Therefore, the number of categorizations for incidents from a given month is not the same as the number of reported incidents from a given month. For this reason, the information included herein does not, and cannot, reflect that there were a certain number of incidents in a given month, nor does the information indicate that the sum total of categorizations is reflective of the total number of incidents. A single incident may result in multiple different categorizations. ...*

Uber made a similar statement in “In re Uber Technologies, Inc., Passenger Sexual Assault Litigation (Case No.: 3:23-MD-03084 CRB) Incident Report Classification for 2023-2024.” By summing the volume of reports by category (sum\_volume) and comparing it to the “Total # of Unique Rides Trips with a Reported Incident”[sic] field provided (unique\_volume) in “In re Uber Technologies, Inc., Passenger Sexual Assault Litigation (Case No.: 3:23-MD-03084 CRB) Supplemental Information Provided by Defendants Pursuant to the Parties’ Agreement, Dated April 4, 2025” I am able to calculate the potential of duplication calculated as the (sum\_volume - unique\_volume) / unique\_volume) due to multiple classifications by Uber per month. The maximum duplication in a single month during 2017-2022 is approximately 3.42%, the minimum is 0.06%, and the average is 1.54% (2017-2022) and 1.75% (2017-2024), with a larger percentage of duplication generally occurring in later years. Duplication of tickets is possible not only within a single month across subcategories but also across multiple months. Uber did not provide an annual equivalent to the field “Total # of Unique Rides Trips with a Reported Incident.”

because Uber's corporate witness testified that Uber uses Flack to obtain reliable data about SA/SM Incidents.<sup>28</sup>

15. **Interrogatory No. 16<sup>29</sup>/29<sup>30</sup> ("Interrogatory No. 16/29" and "Interrogatory No. 16/29 Addendum"):** In response to Plaintiffs' Interrogatory Numbers 16 and 29, Uber produced a list of 207,058 unique Driver UUIDs through the Secure Environment (produced May 1, 2025), as well as a supplemental response regarding 40,976 Drivers with the deactivation date and reason into the Secure Environment (produced June 6, 2025), and a June 10, 2025 declaration from Todd Gaddis. Although Uber provided these lists of deactivated Drivers who had one or more SA/SM Incidents reported against them, Uber has not identified a list of drivers who were deactivated due to a SA/SM Incident or produced data that included the reason a driver was deactivated. In other words, Uber has not produced data that definitively indicates whether deactivated drivers were deactivated because of a specific SA/SM Incident report against them, or for some other reason. Uber claims it does not maintain deactivation data in a way that can be queried to determine whether a driver is no longer active due to a SA/SM Incident or for another reason (e.g., deactivation request by Drivers themselves, expired document, issue with background check, violation of terms of service).<sup>31</sup>

---

<sup>28</sup> July 23, 2025 Deposition of Hannah Nilles at 64-69, 302-303.

<sup>29</sup> Interrogatory 16 asked Uber to identify Driver UUIDs within the SA/SM Incident Data of Drivers who were banned from the Uber platform at any time from 2009 to present for reasons referenced in Uber's U.S. Safety Report 2017-2018, limited to Independent Driver UUIDs contained in the incident report data produced to Plaintiffs via BDO (the SA/SM Incident Data). (Amended Responses, p. 28-29). Because Uber's responses were limited to the SA/SM Incident Data, the Driver UUID list it provided is limited to Drivers who were reported for an SA/SM incident between 2017-2022 and were deactivated (for any reason) between 2017-2022.

<sup>30</sup> Interrogatory 29 asked to identify Driver UUIDs within the SA/SM Incident Data of Drivers who were deactivated and not subsequently reactivated from the Uber platform as a result of any report of any SA/SM Incident categorized under any of the 21 Subcategories in Uber's Sexual Assault and Sexual Misconduct Taxonomy, including the date of deactivation. The Interrogatory was limited to Independent Driver UUIDs contained in the incident report data produced to Plaintiffs via BDO (the SA/SM Incident Data). (Amended Responses, p. 38). Because Uber's responses were limited to the SA/SM Incident Data, the Driver UUID list it provided is limited to Drivers who were reported for an SA/SM incident between 2017-2022 and were deactivated (for any reason) between 2017-2022.

<sup>31</sup> Declaration of Todd Gaddis, 6/10/2025; Uber's Second Amended Responses to Plaintiffs' Second Set of Interrogatories, 5/28/2025.

16. **Interrogatory No. 28:**<sup>32</sup> In response to Plaintiffs' Interrogatory Number 28, Uber produced a list of trip UUIDs into the Secure Environment for each trip that resulted in an incident disclosed in any of Uber's U.S. Safety Reports as well as payment data (e.g., "Refunds and Appeasements (USD)," "Net (USD)," and "Gross (USD)"). Uber provided 12,522 trip UUIDs,<sup>33</sup> which aligned with the exact number of SA/SM Incidents disclosed in the Uber U.S. Safety Reports.
17. **Documents produced in conjunction with the July 11, 2025 Deposition of Todd Gaddis**
- 17.1. **"Weekday/Weekend Trip Volume per State per Year, 2012-2024" (Exhibit 1574 to July 11, 2025 30(b)(6) Deposition of Todd Gaddis):** Provides a table of completed trips by year and state from 2012 through 2024, broken out by weekday and weekend.
- 17.2. **"Count of Drivers by Gender and by Year ('U.S.') 2012-2024" (Exhibit 1575 to July 11, 2025 30(b)(6) Deposition of Todd Gaddis):** Provides a table of the number of Drivers by gender and year from July 2012 through November 2024, broken out by "Male," "Female," "Unknown,"<sup>34</sup> and "Total."
- 17.3. **"Rider Counts by Year 2012-2024 (Exhibit 1576 to July 11, 2025 30(b)(6) Deposition of Todd Gaddis):** Provides a table of the number of Riders by gender and year from 2012 through 2024, broken out by "Female," "Male," "Unknown," and "Total."<sup>35</sup>

<sup>32</sup> Interrogatory 28 asked Uber to identify the amount of payment that Uber received for each trip (by trip UUID) that had a SA/SM Incident and was included any of the following tables: Table 12 of Uber's U.S. Safety Report 2017-2018, Tables 13 through 17 of U.S. Safety Report 2019-2020, and Table 4 of U.S. Safety Report 2021-2022 (Amended Response, p. 37). Uber also produced a document on June 3, 2025 titled "Defs' Responses to ROG 28 Questions" to address questions about this data.

<sup>33</sup> However, 56 of the 'trip\_uuids' that Uber provided did not match to 'trip\_uuids' produced in any of the files in the SA/SM Incident Data. Uber has not explained these inconsistencies. My analysis could only consider trip UUIDs that were in Uber's list as well as in the SA/SM Incident Data.

<sup>34</sup> According to the document: "Gender of driver may not be available for any number of reasons, including but not limited to: incorrect or missing transcription (by tech or by manual review) or missing driver's ID document data as a whole (either at driver's request to delete data or Uber's data retention policy)."

<sup>35</sup> According to the document: "Rider cohort is based upon those accounts who also have a driver account with an identified gender based on their provided document(s)."

**ii. Defendants' Raw Data on Sexual Assault and Sexual Misconduct Incidents ("SA/SM Incident Data")**

18. Judge Cisneros issued an Order on July 9, 2024, requiring Uber to produce data and documents related to SA/SM Incidents in the United States, as well as all underlying data for the trips on which those Incidents occurred.<sup>36</sup> Uber represents that the data it produced in response to the July 9, 2024 Order (and subsequent, related Orders) was exported from Uber's Bliss and Jira systems, and that Uber used a system called Flack to identify which data to export from Bliss and Jira.<sup>37</sup> Uber's witnesses have testified on behalf of Uber that Uber exclusively used Bliss and Jira as the systems for recording and storing data related to reported SA/SM Incidents.<sup>38</sup>
- 18.1. **Bliss and Jira:** Bliss is a system Uber uses for customer support interaction, where Uber collects and stores information and data about SA/SM Incidents that are reported to Uber.<sup>39</sup> Jira is another software system that Uber uses for collecting data about SA/SM Incidents that are reported to Uber, but typically only the incidents Uber classifies as most serious (according to Uber's taxonomy) are included in Jira. The general process at Uber starting in 2017 was to enter reports of SA/SM Incidents (referred to by Uber as "tickets") into Bliss, and then enter a subset of those tickets into Jira.<sup>40,41</sup>
- 18.2. **Flack:** In addition to Bliss and Jira, Uber used a third system, Flack, to store and analyze data related to SA/SM Incidents. Uber describes Flack as a "protected database" for housing data about

[REDACTED] I have requested that data, but understand that Uber has not produced it to date.

19. The April 9, 2025 production of SA/SM Incident Data consists of the following four files. I refer to the data contained in these files in my report as Uber's "SA/SM Incident Data," which are:

- 19.1. **PROD\_20250407\_Jira\_Ticket\_Exports\_UPDATED.csv ("Jira Tickets")**: The Jira Tickets data provides [REDACTED]. This file includes data from the fields Uber identified as Jira fields,<sup>44</sup> including all fields identified in the declaration from Katherine McDonald in January 2025.<sup>45</sup> This data included reports categorized as Sexual Assault or Sexual Misconduct with report tickets created between January 1, 2017, and December 31, 2022.<sup>46</sup>

- 19.5. I received the Defendants’ SA/SM Incident Data and used it to:
- 19.5.1. Validate other datasets, including the Defendants’ Processed Data; and
  - 19.5.2. Incorporate exports from the raw Jira Tickets, Jira Comments, and Bliss Messages into Keller Report – Appendix D1.
- 19.6. There are additional analyses pertinent to my opinions that I would like to perform using the SA/SM Incident Data, however, the data as produced appears incomplete and contains inconsistencies. To run those additional analyses, I would need to use my professional judgment to address gaps and inconsistencies. It is more appropriate to conduct my analyses on data that is as complete and accurate as possible. A review of the Flack field list provided in Todd Gaddis’ August 18, 2025 declaration indicates that Uber maintains additional data that may resolve some of these inconsistencies and fill in the identified gaps. I understand that this

additional data has been requested, and I reserve the right to supplement my analyses pending the outcome of the request, whether or not the additional data is produced.

20. I outline the steps that I took to process and validate the SA/SM Incident Data in Keller Report Appendix A.

### iii. Data Dictionaries and Supplementary Files

21. **Data Dictionaries:** Uber provided multiple “data dictionaries” that list the fields that exist in Jira and Bliss, along with descriptions that indicate how Uber used those fields.<sup>49</sup> Uber has also provided declarations confirming that Uber used those fields from 2017 through 2022 to collect and store information related to SA/SM Incident reports and that the field lists are accurate and complete.<sup>50</sup> I analyzed and interpreted the data consistent with the information Uber provided in these data dictionaries.

## V. Methodology

22. The methodology and steps I took to process and analyze the data relevant to this matter are provided in Keller Report Appendix A where I outline in detail the steps I took to load, transform, and clean the datasets that I analyze in this report. I also note inconsistencies that I found while processing these data sources.
23. Uber required that all Plaintiffs and their experts conduct any analysis of the SA/SM Incident Data in a secure virtual environment (AWS Secure Environment). More information about that system is detailed in Keller Report Appendix A of this report. Any analysis I performed I did so in the AWS Secure Environment.
24. I have disclosed the underlying code and methodology used in my analysis so that it is fully reproducible. The tools (e.g., Amazon Web Services, GitLab), coding languages (e.g., Python, SQL), and data processing techniques I used in this report are standard in the fields of Data Science and Data Analytics, and are widely recognized and

accepted across the scientific and professional community. They were provisioned to me in a Secure Environment by a third-party contractor, BDO, agreed to by Defendants. Any qualified expert could replicate my process and confirm the results, demonstrating the methodology is testable and reliable.

25. Because the data in this matter is confidential, subject to a Protective Order, and restricted to this litigation, it could not be published in peer-reviewed forums. However, the analytical methods and tools I applied are consistent with widely-accepted techniques that have been validated and published extensively in peer-reviewed literature, as discussed in Keller Report Appendix A.
26. The procedures I used are based on direct and verifiable calculations. As such, a potential error rate or confidence interval is not applicable. I subjected my results to manual quality checks before including them in this report.

## **I. Opinion 1: Uber's analyses shows hundreds of thousands of Sexual Assault and Sexual Misconduct Incidents reported in the U.S. from 2017 through 2024.**

### **A. From 2017 through 2024, Uber tracked 546,196 incidents of Sexual Assault and Sexual Misconduct.**

27. Uber's internal analyses show that 546,196 SA/SM Incidents were reported to Uber from 2017 through 2024, according to Uber's Flack Incident Report Classification Data. The following table shows the number of SA/SM Incidents that were reported to Uber each year for each Subcategory, according to the Flack Incident Report Classification Data. This table also indicates whether Uber disclosed each Subcategory in its U.S. Safety Reports. This table includes SA/SM Incidents reported against Riders, Drivers, and Third Parties.

**B. Between 2017 and 2024, Uber received a Sexual Assault or Sexual Misconduct Report at an average frequency of every eight minutes.**

28. From 2017 through 2024, an SA/SM Incident was reported to Uber at an average frequency<sup>51</sup> of every eight (7.7) minutes. The average frequency of SA/SM Incident reporting was similar between 2017 and 2023, with the 2017 average frequency at one SA/SM Incident report every 7.4 minutes and the 2023 average frequency at one SA/SM Incident report every 7.5 minutes. In 2024, SA/SM Incident reports were more frequent than in 2017 or 2023, with an SA/SM Incident being reported on average every 6.4 minutes.

<sup>51</sup> I calculated “average frequency” as follows: the total number of minutes between 2017 and 2024 divided by the number of SA/SM Incidents in the same time period, based off of Flack Incident Report Classification Data. Wherever I use the term “average frequency,” I refer to this calculation.

29. The following figure shows the average frequency of SA/SM Incidents on an annual basis from 2017 through 2024, calculated by dividing the total number of minutes in each year by the total number of SA/SM Incidents for that year, according to the Flack Incident Report Classification Data. This figure includes SA/SM Incidents reported against Riders, Drivers, and Third Parties.

**Figure 1: Average Frequency of Sexual Assault and Sexual Misconduct Incidents Per Year in Minutes**  
(Source: Flack Incident Report Classification Data, 2017-2024)

30. The average frequency<sup>52</sup> for Rape and Attempted Rape incidents was the equivalent of [REDACTED]. The following figure shows the average frequency of Rape and Attempted Rape on an annual basis from 2017 through 2024, calculated by dividing the total number of hours in each year by the total number of SA/SM Incidents for that year, according to the Flack Incident Report

<sup>52</sup> I took the average frequency calculation noted above and converted it to hours by dividing by 60.

**C. The number and rate of Sexual Assault and Sexual Misconduct Incidents has increased since 2021.**

31. The number and rate<sup>53</sup> of SA/SM Incidents increased year-over-year every year from 2021 through 2024. In 2023 and 2024, the SA/SM Incident rates per 100 million trips were 5,096 SA/SM Incidents and 5,467

---

<sup>53</sup> I calculate “rate” as follows: the number of Sexual Assault and Sexual Misconduct (SA/SM) incidents divided by the total number of Completed Rides Trips in the United States (see Interrogatory No. 23), multiplied by 100,000,000 to express the rate per 100 million completed trips. Uber also utilizes the same type of rate calculation in its U.S. Safety Reports. Wherever I use the term “rate,” I refer to this calculation.

SA/SM Incidents, respectively. From 2022 through 2024, the rate of SA/SM incidents increased 15.7% (21.1% since 2021).

The following figure shows the rate of SA/SM Incidents that Uber classified as Rape, calculated as the number of Rape Incidents divided by the total number of completed Uber trips multiplied by 100 million. This figure includes Rape Incidents reported against Riders, Drivers, and Third Parties.

**Figure 4: Rate of Rape Incidents Per Year**

35. Since 2022, SA/SM Incident numbers have also increased within the Publicly-Disclosed Five categories as a whole. Uber's 2021-2022 U.S. Safety Report disclosed a total of 1,080 SA/SM Incidents in 2021 and a total of 1,637 SA/SM Incidents in 2022. For those same Publicly-Disclosed Five categories, [REDACTED]

[REDACTED]<sup>54</sup> In 2021 and 2022, the SA/SM Incident rate for the Publicly-Disclosed Five categories was 142 and 148 per 100 million trips, respectively, while [REDACTED] rates were [REDACTED] per 100 million trips in 2023 and 2024, respectively.

---

<sup>54</sup> I calculate "rate" as follows: the number of Sexual Assault and Sexual Misconduct (SA/SM) incidents divided by the total number of Completed Rides Trips in the United States (obtained from Flack Incident Classification Data), multiplied by 100,000,000 to express the rate per 100 million completed trips. Wherever I use the term "rate," I refer to this calculation.

36. The following figure shows the rate of SA/SM Incidents that Uber classified in the Publicly-Disclosed Five categories, calculated as the number of SA/SM Incidents divided by the total number of completed Uber trips multiplied by 100 million. This figure includes SA/SM Incidents reported against Riders, Drivers, and Third Parties.

**D. Uber acknowledges that Sexual Assault and Sexual Misconduct is underreported on its platform.**

37. Uber has acknowledged that SA/SM Incidents are underreported nationwide, citing a U.S. Department of Justice Study that found that only 25% of Sexual Assault or Rape incidents are reported to the police.<sup>55</sup> Internally, Uber also noted that it should assume that the SA/SM Incident reports received do not represent all of the SA/SM Incidents that occurred, and that actual numbers of SA/SM Incidents likely exceeded

<sup>55</sup> 2017-2018 U.S. Safety Report, p.6; Deposition of Katherine McDonald, 4/24/2025, p. 235-236, p. 238-241.

reported figures.<sup>56</sup> An Uber document from 2016 entitled “Sexual Assault and Rape Incident Rate Data Assumptions” states:

“UBER only has data on incidents that are reported to us. It is likely and we should consider addressing that our numbers are lower than actual incidents due to underreporting – causes of which include fear for safety, intimidation, shame, etc. On our platform, many drivers have riders' home addresses, which alone could cause significant underreporting.”

## **VI. Opinion 2: Uber’s U.S. Safety Reports Disclosed Three Percent of the Sexual Assault and Sexual Misconduct Incident Reports that Uber Received in the U.S. from 2017 through 2022.**

### **A. Uber excluded 97% of SA/SM Incidents from its U.S. Safety Reports.**

38. Uber acknowledges that it has publicly disclosed 3% of the SA/SM Incidents reported from 2017 through 2022.<sup>57</sup> The following figure is an unedited screenshot from an Uber blog post.

<sup>57</sup> In response to an August 6, 2025 New York Times article, (<https://www.nytimes.com/2025/08/06/business/uber-sexual-assault.html>), Uber stated that the incidents it disclosed were limited to the “3% most serious.” (“Uber’s record on safety is clear.” Uber Newsroom, <https://www.uber.com/newsroom/ubers-safety-record/>).

Of those reports, the vast majority are about **less serious incidents**, like allegations of staring or asking personal questions.

These are raw numbers disclosed in litigation that have **not been fully audited for accuracy.**

39. According to Uber’s Flack Incident Report Classification Data, Uber received 392,828 SA/SM Incident reports from 2017 through 2022. In comparison, Uber’s U.S. Safety Reports disclosed 12,522 reports during the same time period.<sup>58</sup> Uber has also tracked and classified 153,368 SA/SM Incidents from 2023 through 2024 that it has not disclosed in a Safety Report. Considering the SA/SM Incidents from 2023 through 2024, Uber has currently disclosed ~~0.023%~~ 2.3% of all SA/SM Incidents from 2017 through 2024

The following figure shows the difference between the number of SA/SM Incidents that Uber disclosed in its U.S. Safety Reports (blue) and the number of SA/SM Incidents based on Uber's Flack Incident Report Classification Data (purple). Each bar is independent and should not be added together. In other words, the 71,080 SA/SM Incidents in Flack Incident Report Classification Data in 2017 should not be added to the 2,936 SA/SM Incidents reported in the U.S. Safety Report to obtain the total volume of SA/SM Incidents that year. This figure includes SA/SM Incidents reported against Riders, Drivers, and Third Parties.

Two separate total rows are displayed because Uber's U.S. Safety Reports covered years 2017-2022, while the Flack Incident Report Classification Data covered years 2017-2024. **B. Uber internally designated Subcategories of Sexual Assault and Sexual Misconduct Incidents as “Serious SA/SM”<sup>59</sup> but did not publicly disclose them.**

42. In its U.S. Safety Reports, Uber publicly disclosed the number of SA/SM Incidents in the five Subcategories it referred to as the “most serious.”<sup>60</sup> However, internally, Uber referred to the following eight additional Subcategories of SA/SM Incidents as “Serious SA/SM.”<sup>61</sup>
- 42.1. Sexual Assault - Non-Consensual Touching - Non-Sexual Body Part
  - 42.2. Sexual Assault - Attempted Kissing - Sexual Body Part

**D. Uber received reports of Sexual Assault or Sexual Misconduct Incidents that Uber categorized into the Publicly-Disclosed Five categories but did not include in its U.S. Safety Reports.**

<sup>72</sup> It appears Uber discontinued use of this designation in 2021.

<sup>74</sup> From 2023 through 2024, Uber did not classify any additional SA/SM Incidents into the “Parent Category Usage Tracking” Subcategory.

<sup>75</sup> The SA/SM Incident Data contains additional data that may be used to analyze the discrepancy between the number of SA/SM incidents Uber categorized into the Publicly-Disclosed Five categories from 2017 through 2022 and the number of SA/SM Incidents Uber disclosed in its U.S. Safety Reports. However, due to the noted gaps and inconsistencies in that data, it is more appropriate to conduct my analyses on data that is as complete and accurate as possible and I reserve the right to supplement my analyses pending the outcome of the request, whether or not the additional data is produced.

## VII. Opinion 3: Uber Analyzed “Precursors”<sup>76</sup> to Sexual Assault and Sexual Misconduct Incidents, Which It Did Not Disclose in U.S. Safety Reports.<sup>77</sup>

### A. Uber’s internal analyses showed that trips during late-night hours on weekends are “high risk”<sup>78</sup> for Sexual Assault and Sexual Misconduct Incidents.

50. Uber’s internal documents indicate that the day of the week and time of day of a trip are relevant factors for SA/SM Incidents, and that trips during night hours and on weekends are correlated with higher rates of SA/SM Incidents.<sup>79</sup> Certain analyses showed that [REDACTED]

<sup>77</sup> Based on my review of the Flack fields list in Todd Gaddis’ August 18, 2025 Declaration and my review of the documents and testimony in this case, it appears that Uber maintains data sufficient to analyze the trends and patterns discussed in this section. However, the SA/M Incident Data as produced appears incomplete and contains inconsistencies. To run those additional analyses, I would need to use my professional judgment to address gaps and inconsistencies. It is more appropriate to conduct my analyses on data that is as complete and accurate as possible and I reserve the right to supplement my analyses pending the outcome of the request, whether or not the additional data is produced.

**B. Uber identified male Drivers and female Riders as well as proximity of the pick-up to a bar as “precursors”<sup>85</sup> to Sexual Assault and Sexual Misconduct.**

51. Uber’s analysis of its SA/SM Incident data showed that pairings between opposite gender Riders and Drivers and the proximity of the pickup location to a bar were correlated with SA/SM Incident reports.<sup>86</sup> Uber’s data showed that SA/SM Incidents were more likely to be reported against men, with [REDACTED]<sup>87</sup> For Rape incidents specifically, Uber’s data showed that reports were more than [REDACTED] **vers.**<sup>88</sup> Uber’s internal analysis showed that [REDACTED]

Uber has also stated: "Uber will ban users from the platform if we are able to obtain a statement of experience from the survivor and/or obtain relevant facts (e.g., GPS data, timestamps, videos/photos, in-app communications). **VIII. Opinion 4: Uber Cultivated a Data-Rich Environment From Its Founding, and Implemented a Machine Learning Algorithm Over a Decade Later to “prevent sexual assaults.”<sup>101</sup>**

**A. At Uber, “Data is Queen.”<sup>102</sup>**

59. Uber says that data is “crucial for [its] products”<sup>103</sup> and that technology is “at the heart” of its safety approach.<sup>104</sup> A 2021 Internal Audit at Uber reported that Uber collects five terabytes of data daily and relies on approximately 100,000 data tables to power its products.<sup>105</sup> As “a data-driven company, Uber makes every business decision based on large-scale data collected from the marketplace,”<sup>106</sup> with data-driven models contributing over [REDACTED], as of 2021.<sup>107</sup>
60. Uber’s data capabilities are vast: since its launch in March 2009,<sup>108</sup> Uber has collected, maintained, and analyzed numerous data points from its trips, Drivers, and Riders, and leveraged these data points to develop new features, including new safety features.<sup>109</sup> The first SA/SM Incident was reported to Uber at least by December 2012.<sup>110</sup> Produced data and public reports indicate that Uber collected and maintained at least some information on trips with SA/SM Incidents at least as early as 2014.<sup>111</sup>

**B. Uber developed S-RAD in 2017 and launched S-RAD in 2022.**

61. Uber learned, in part through data mining its own data, that reported SA/SM Incidents were correlated with certain risk factors.<sup>112</sup> From 2016 to 2017, Uber developed and piloted a product called Safety Risk Assessed Dispatch (“S-RAD”) to “prevent sexual assaults.”<sup>113</sup> According to Uber: “[t]he S-RAD model leverages a variety of trip, driver, and rider-level predictors to detect driver-rider matches with elevated risk of sexual assaults.”<sup>114</sup>
62. S-RAD has the following components and definitions:
- 62.1. **“Features” or “Predictors”**:<sup>115</sup> Specific data inputs (e.g., [REDACTED] that Uber has factored into the S-RAD model to identify risk of SA/SM Incidents for potential Driver-Rider pairings (which are also called “supply plans” by Uber).
  - 62.2. **Machine Learning Model**:<sup>116</sup> At the point of potential Driver-Rider pairing, Uber uses a machine learning model, which leverages Features to generate an S-RAD score for each potential Driver-Rider pairing.
  - 62.3. **S-RAD score**:<sup>117</sup> A computed numerical score [REDACTED] for each potential Driver-Rider pairing.”
  - 62.4. **S-RAD threshold**:<sup>118</sup> Uber flags and potentially seeks to avoid potential Driver-Rider pairings with S-RAD scores [REDACTED].

<sup>112</sup> UBER\_JCCP\_MDL\_003306684, p. 2, 26-30; UBER\_JCCP\_MDL\_000031720, p. 3, 8-10.

<sup>118</sup> UBER\_JCCP\_MDL\_003602459.

62.5. **“Trigger-rate”**:<sup>119</sup> The percentage of higher-risk trips Uber flags and takes action upon. [REDACTED]

62.6. **“Soft Filtering” intervention**:<sup>120</sup> After Uber flags a potential Driver-Rider pairing with S-RAD, one intervention Uber has used is what Uber calls “soft filtering.” Uber adds a penalty to the wait time score for potential Driver-Rider pairings that have a risk of SA/SM above the S-RAD threshold.<sup>121</sup> In other words, making it less likely that Uber will dispatch them.

62.7. [REDACTED] using what Uber calls “hard filtering.” While Uber calls this “hard filtering,” this is a non-standard use of the term: potential Driver-Rider pairings are not always filtered out or blocked. With “hard filtering,” Uber flagged potential Driver-Rider pairings above the S-RAD threshold unless all potential Driver-Rider pairings had S-RAD scores above the S-RAD threshold. In those cases, [REDACTED]

62.8. [REDACTED] risk of SA/SM above its S-RAD threshold, but which it nonetheless dispatches.

62.9. **Holdout Group**:<sup>124</sup> Uber holds back [REDACTED] as a control group to study the effectiveness of SA/SM on an ongoing basis. For these potential Driver-Rider pairings, [REDACTED] meaning that Uber takes no action on them.<sup>126</sup>

63. In 2017, Uber trained the S-RAD model on trips from 2016.<sup>127</sup> Between 2017 and 2018, Uber tested over 50 different versions of the model and considered over 200 inputs.<sup>128</sup> In the first version of the model, Uber ultimately incorporated 32 Features that were “based on past research on the correlates and causes of sexual assault.”<sup>129</sup> The inputs that Uber found to be the most predictive of Driver-Rider pairings with an elevated risk of SA/SM included but were not limited to: the time of day, day of week, proximity of the pickup location to bars/restaurants, ratings of the Driver and Rider, and previous SA/SM Incidents against the Driver and Rider reported to Uber.<sup>130</sup>

**C. S-RAD dispatches some trips above the “Flagging Threshold.”<sup>140</sup>**

66. When a trip is requested, Uber scores each potential Driver-Rider pairing based on the risk of SA/SM Incidents with the goal of reducing the probability of SA/SM Incidents.<sup>141</sup> When Uber dispatches a Driver to a Rider, S-RAD is the only way Uber takes into account, and attempts to reduce the risk of, SA/SM Incidents.<sup>142</sup> Uber scores potential pairings [REDACTED] risky.<sup>143</sup>
67. The following figure is an illustration from Uber’s internal documents that outlines how S-RAD flags certain trips.<sup>144</sup>

<sup>144</sup> Other Uber programs are designed to block trips when flagged: Uber also developed the “Safe Dispatch Model (SDM)”, which identifies and blocks requests that pose a potential risk to Driver or Rider safety on cash trips (UBER-MDL3084-000008501; UBER\_JCCP\_MDL\_000960333, p.14).

69. There are three ways in which potential Driver-Rider pairings are not actioned by S-RAD:

69.1. **Holdout Groups:** Uber assigns

<sup>148</sup> Trips in holdout groups do not receive intervention from the S-RAD program as long as they remain in the holdout group. In other words, Uber pairs Drivers and Riders but does not intervene based on the S-RAD score of a potential Driver-Rider pairing.<sup>149</sup> As an example shown in the following image, a potential Driver-Rider pairing in a temporary holdout group may receive an S-RAD score above the flagging threshold (here, hypothetically 0.888), but the Driver-Rider pairing will still be dispatched anyway.

<sup>148</sup> UBER\_JCCP\_MDL\_003602459.

<sup>149</sup> UBER\_JCCP\_MDL\_003602459.

- 69.2. **Below the S-RAD Threshold:** For potential Driver-Rider pairings below the flagging threshold, Uber does not use S-RAD to prioritize Driver-Rider pairings with lower S-RAD scores<sup>150</sup> As an example shown in the following figure, among Driver-Rider pairings with S-RAD scores below the flagging threshold (here, hypothetically 0.936), Uber may dispatch the trip with the highest S-RAD score.

[REDACTED]<sup>167</sup> In other words, although 100% of potential Driver-Rider pairings are scored by S-RAD, [REDACTED], Uber does not intervene with S-RAD.

#### E. Bellwether Plaintiffs' S-RAD Scores

74. Uber produced some information about S-RAD scores for the Bellwether Plaintiffs.<sup>168</sup> In the following section, I include overall trip S-RAD scores for the trip associated with Uber Drivers dispatched to each Bellwether Plaintiff as well as the inputs associated with S-RAD features that Uber analyzed as “precursors”<sup>169</sup> to SA/SM Incidents, including bars and restaurants near to the pick-up location, Driver’s previous Safety Incident reports (e.g., interpersonal crime incidents (“IPC”), SA/SM incidents), Driver 1- and 2- star ratings,<sup>170</sup> and Driver weekend and late-night request rates.<sup>171</sup>
75. Because Uber has not produced comprehensive information on how any S-RAD scores and thresholds were calculated or weighted, nor the relative scores of other available Driver-Rider pairings, it is not possible for me to translate any particular score in terms of what it means for the risk of an SA/SM Incident. Should data that allows this analysis be

<sup>172</sup> Uber did not produce information as to how these scores were calculated.

**IX. Conclusion**<sup>173</sup>

77. Given my analyses, my review of documents and data, and my professional experience, it is my opinion that Uber disclosed in its U.S. Safety Reports, only 3% of the 546,196 SA/SM Incidents it tracked between 2017 and 2022, and has not disclosed 97.7% of the SA/SM Incidents it tracked between 2017 through 2024.
78. It is further my opinion that Uber internally designated Subcategories of Sexual Assault and Sexual Misconduct Incidents as “Serious SA/SM” but did not publicly disclose them. Between 2017 and 2022, Uber classified [REDACTED] SM/SA incidents as “Serious SA/SM” but did not disclose [REDACTED] of those incidents in its U.S. Safety Reports. From 2017 through 2024, Uber has not disclosed [REDACTED] of the SA/SM Incident reports it classifies as “Serious SA/SM”.
79. It is also my opinion that from 2017 through 2024, Uber has tracked, on average, a report of an Uber-related SA/SM incident approximately every 7.7 minutes. In 2024, that frequency was higher – Uber tracked a SA/SM Incident report every 6.4 minutes. From 2017 through 2024, Uber has tracked the equivalent of [REDACTED] [REDACTED].
80. I conclude that from 2021 through 2024, both the number and incident rate of SA/SM Incidents that Uber tracked increased every year. [REDACTED]
81. It is my further opinion that Uber knew of and analyzed multiple “precursors”<sup>174</sup> to SA/SM Incidents but did not disclose this information in Uber’s U.S. Safety Reports.

---

<sup>173</sup> This paragraph is not intended to provide a comprehensive summary of my opinions.

<sup>174</sup> UBER\_JCCP\_MDL\_000356814.

82. Additionally, Uber cultivated a data-rich environment from its founding, had extensive data capabilities,<sup>175</sup> and did not develop S-RAD until 2017 or deploy it until 2022 to address SA/SM Incidents on its platform.
83. Finally, I confirmed that Uber collected data and information on the Drivers and regarding the Plaintiff Bellwethers trips. It is my opinion that this data resembled the information of other documents and data produced for other SA/SM Incidents.

## I. Core Tenets of Data Mining and Analytics

1. As stated in my report and further discussed in Keller Report - Appendix C, I am an expert in Data Mining and Analytics. Data Mining and Analytics uses systematic data preparation and exploration to find patterns, trends, and relationships in order to develop useful, understandable, and sometimes actionable insights for others relying upon both structured and unstructured data.<sup>1</sup> Data Science is an interdisciplinary field that combines concepts and lessons from statistics, mathematics, computer science, management science, and engineering.<sup>2</sup> In my experience, Data Mining and Analytics often overlaps with Data Science, which uses the core tenets of Data Mining and Analytics but also builds predictive models using artificial intelligence and machine learning. A data analyst will provide more descriptive analytics using Excel, SQL, and other data visualization tools, while a data scientist will often provide predictive and prescriptive analytics, using programming languages such as Python<sup>3</sup> or R, and engage in data mining.<sup>4</sup> As an expert in Data Mining and Analytics, my work employs the common toolset of a Data Scientist (e.g., Python, SQL) to service descriptive analytics of that of an analyst; hence, Data Mining & Analytics.
2. The foundations of Data Mining and Analytics and Data Science lie in statistics, where methods such as regression and hypothesis testing were formalized in the 19th and early 20th centuries by figures like Gauss, Fisher, and Neyman–Pearson.<sup>5</sup> Starting in the mid-1950s, businesses started using computerization, with only one computing resource in the organization, known as “the mainframe.”<sup>6</sup> In 1960, John Tukey published a paper entitled “The Future of Data Analytics,” which framed data analytics as its own discipline.<sup>7</sup> In 1970, Edgar Codd published a paper describing the first relational database, where data is stored in simple tables with rows and fields that can be queried by users -

a method employed still today, including for this report.<sup>8</sup> Starting in the late 1970s, the first personal computers appeared, and in 1981, the IBM PC debuted as the first in the market, after which users began utilizing their own personal computers, including spreadsheet and word processing applications.<sup>9</sup> The programming language, Python, was developed in 1991 by Guido van Rossum.<sup>10</sup> The formal use of the term Data Mining began that same decade,<sup>11</sup> and through the 2000s, advances in cloud computing, open-source programming languages, and machine learning libraries expanded these capabilities, giving rise to a field that is now widely called Data Science.<sup>12</sup>

3. In just 20 years, from 2000 to 2020, the proportion of digital storage in the world surged from 25% to 98%, while the remaining consisted of other storage.<sup>13</sup> Today, data analysts and data scientists are essential to nearly every sector of the economy, allowing organizations to process massive volumes of information, identify trends, and make evidence-based decisions. The rapid growth of the data analysis and data science fields fueled the technology boom of the 1990s and continues to shape the current era, as artificial intelligence becomes widely accessible across industries.<sup>14</sup> Data science has become essential for data-heavy modern businesses, particularly those in the “tech” industry, like Uber.<sup>15</sup>

4. Data can be structured, unstructured, or semi-structured.<sup>16</sup> I have spoken at numerous conferences and published articles on the use of structured and unstructured data, specifically for use in investigations and litigation. Structured data is that that is machine-readable data, meaning that it is easily processed by a computer. The average person may encounter structured data through formats such as a CSV or Excel spreadsheet; however, structured data takes on other forms (e.g., JSON, XML, HTML) for those working in the field of Data Mining and Analytics and/or Data Science. Unstructured data is typically text-based data, but also might include photos and videos. Text-based unstructured data can be turned into structured data by using keyword searches and natural language processing to extract key phrases or dates, as an example.
5. Specifically, in this report, I have used four fundamental tenets of Data Mining and Analytics:

#### Step 1: Data Preparation (ETL)<sup>17</sup>

6. Before meaningful analysis can occur, raw data must undergo preparation, often known as the extraction, transformation, and loading process (“ETL”) – also known sometimes less formally as “wrangling.” This process involves collecting and consolidating data from multiple sources and then cleaning/standardizing and transforming it into a consistent format amenable to analysis. Cleaning/standardization typically requires identifying and addressing erroneous and inconsistent values (e.g., Kansas, KS, ks, Kansas), placeholders for null values (e.g., \N, NULL”), or irregular datatypes (e.g., dates stored as text fields). Under certain circumstances, data preparation involves creating additional fields (known as data enrichment) to assist with the data analysis and reconciling duplicate entries.<sup>18</sup>

#### Step 2: Data Validation<sup>19</sup>

7. Validation is the process of ensuring that data is accurate and reliable before being used. In practice, this involves checking data quality, confirming that

preprocessing steps were applied correctly, and cross-checking outputs against known benchmarks or domain knowledge to identify possible issues.<sup>20</sup>

### Step 3: Descriptive Analytics & Visualization<sup>21</sup>

8. Descriptive analytics focuses on summarizing historical data to answer the question, “what happened?” It uses measures such as averages, distributions, and percentages to provide an overview of past events, including outlier detection, trend analysis, and pattern recognition.<sup>22</sup> While descriptive analytics does not predict future outcomes, it forms the foundation for more advanced approaches such as predictive and prescriptive modeling.
9. As part of the descriptive analytics process, visualization transforms raw numbers into graphical representations (i.e., charts, plots, dashboards, maps) to make the data easier to interpret and communicate.<sup>23</sup> The four pillars of data visualization include: 1) clear purpose, 2) relevant content, 3) appropriate structure, 4) useful formatting.<sup>24</sup> Several libraries in Python exist exclusively for creating visualizations, for example Matplotlib,<sup>25</sup> Plotly,<sup>26</sup> and Seaborn.<sup>27</sup> These allow the user creating images to nearly infinitely customize their visualisations, by changing the font, color scheme, axis labels, and titles of the visualizations they create. Entire websites and blogs exist solely for data scientists to share the beautiful and effective images that they create.<sup>28</sup>

#### Step 4: Automation

10. To ensure reproducibility and operational continuity, work should be scripted and documented in a transparent manner. Scripts should be written with clear comments and organization, supported by a README file that outlines essential information about a project, including (but not limited to) the order in which scripts should be executed and any other intricacies that users running the should know.<sup>29</sup>

## II. Tools and Software Employed

11. I was required by an agreement between the Defendants and Plaintiffs<sup>30</sup> to work within a secure environment. To effectuate the production of data responsive to the Courts' Orders, Uber retained BDO USA as a Third-Party Administrator and Auditor for an Amazon Web Services (AWS) platform to manage the production, access, and use of SA/SM Incident Data and the resources necessary to analyze it ("AWS Secure Environment").
12. Per my specifications, the AWS Secure Environment was provisioned with the following services: 1) EC2 (virtual computing), 2) AWS Redshift SQL database (database and virtual computing), 3) SageMaker (machine learning and virtual computing) 4) GitTechnology through GitLabs (tracked changes for code) 5) VSCode (writing and executing code) to facilitate my analysis. I primarily relied upon the AWS Redshift SQL database and Python (via Jupyter notebooks in VS Code, which was installed in the AWS Secure Environment) for my work. Within Python, I utilized the following industry-standard libraries: Pandas,<sup>31</sup> NumPy,<sup>32</sup>

This file specifies all the packages employed, as well as their version numbers, to allow for reproducibility and to avoid installation or configuration issues that might arise in other environments.

13. I developed several custom tools and functions to assist me in loading the data and creating the report. Those scripts have also been disclosed with my other code.<sup>39</sup>
14. The AWS Secure Environment provided me with access to specific S3 Buckets (i.e., file storage) using the following structure:

The Defendant Team does not have access. No work can be downloaded outside of the AWS Secure Environment from this folder. An "Ingress" bucket was added to allow the Plaintiff Team to upload data from outside the AWS Secure Environment to the AWS Secure Environment.
- 14.3. **Bucket 3: Defendant Only Workspace:** This is the equivalent of Bucket 2, but made for the Defendant Team. The Plaintiff Team does not have access.
- 14.4. **Bucket 4: Plaintiff Downloads:** this allows the Plaintiff Team to transfer work product to be downloaded outside of the AWS Secure Environment. The Defendant Team does not have access.
- 14.5. **Bucket 5: Defendant Downloads:** This is the equivalent of Bucket 4, but for the Defendant Team. The Plaintiff Team does not have access.

### III. Methodology

15. For each of the five fundamental tenets of Data Mining and Analytics, I describe the steps I took for each dataset, with one section for each tenant and subsection for each dataset.

#### Step 1: Data Preparation (ETL)

16. This section details the steps that I took to prepare each dataset, with one subsection for each dataset that was processed.

#### Bliss/Jira Incident Report Classification Data and Flack Incident Report Classification Data

17. Uber produced the Bliss/Jira Incident Report Classification Data and Flack Incident Report Classification Data outside of the AWS Secure Environment "Bucket 1." I copied the contents of those files onto the AWS Secure Environment by uploading them to the "Bucket 2" ingress using the web-based upload feature in the Amazon Console.
18. Once loaded, I cleaned the datasets to make the fields consistent for analysis, which included reformatting date fields so that month formatting aligned across datasets (e.g., "2025-09" to represent September 2025) and standardizing field names. I also standardized inconsistent formatting of spaces around dashes ("-") or slashes ("/") that were present in the "Category" column. Both datasets were

formatted such that each row was a Category, with a column for each month of data. I removed any “total” rows from this data and processed them separately so as not to create inaccurate calculations later in my analysis. I then pivoted the data into a consistent format where each row represented a single month or year and Category. I added two fields: 1) translating the “Category” to the corresponding Subcategories as they are reported in Uber’s published Safety Reports, and 2) identifying which Categories are considered to be “Serious SA/SM” by Uber.<sup>40</sup>

19. For the Bliss/Jira Incident Report Classification data specifically, I extracted the rows labeled “Total # of Completed Rides Trips” and “Total # of Unique Rides Trips with a Reported Incident”<sup>41</sup>, keeping the month and values from the data separately from the Category-level data.

### Interrogatory No. 28

20. Uber produced Interrogatory No. 28 into AWS S3 “Bucket 1,” which permitted only read access to the data. I downloaded the data from “Bucket 1” using command-line tools executed via Python onto the Amazon Workspace provisioned by BDO and uploaded the data into “Bucket 2” for further processing and analysis. From there, I then loaded all files into the AWS Redshift SQL database using Python. No additional cleaning or standardization was necessary for this file.

### Interrogatory No. 16/29 and Interrogatory No. 16/29 Addendum

21. Uber produced Interrogatory No. 16/29 and Interrogatory No. 16/29 Addendum into AWS S3 “Bucket 1,” which permitted only read access to the data. I downloaded the data from “Bucket 1” using command-line tools executed via Python onto the Amazon Workspace provisioned by BDO and uploaded the data into “Bucket 2.” From there, I then loaded all files into the AWS Redshift SQL database using Python. No additional cleaning or standardization was necessary for this file.

I note that Ms. McDonald gives inconsistent testimony about the categorization of Indecent photography/Videography Without Consent.” I considered that Subcategory “non-serious” based on Ms. McDonald’s testimony on p. 61 to 62 and 64 to 66, as well as Mr. Wong and Ms. Payne’s corroborating testimony.

<sup>41</sup> The “Total # of Unique Rides Trips [sic] with a Reported Incident” had identical values for each month in both the Bliss/Jira Incident Report Classification Data and the Flack Incident Report Classification Data.

## SA/SM Incident Data

22. Pursuant to Appendix A to Confidentiality Agreement between BDO USA and Plaintiffs' Steering Committee, Uber produced the SA/SM Incident Data into AWS S3 "Bucket 1," which permitted only read access to the data. I downloaded the data from "Bucket 1" using command-line tools executed via Python onto the Amazon Workspace provisioned by BDO.
23. The files were produced as a compressed .zip file, which I extracted in the AWS Secure Environment. Again, using command-line tools executed via Python, I uploaded the data into "Bucket 2" for further processing and analysis. I deleted the .zip file and associated extracted files from the AWS Secure Environment.
24. I then loaded all files into the AWS Redshift SQL database using Python. While the Jira tables were small enough to load directly into the AWS Redshift SQL database, the Bliss tables required splitting the files into smaller chunks and uploading them individually into staging tables of 1,000,000 lines or smaller. Once the Bliss staging tables were uploaded into the AWS Redshift SQL database, I combined them back into their original tables.
25. I undertook the following cleaning and standardization steps while loading the data. Those are as follows.
  - 25.1. **Converting Empty (Null) Values:** Within the data, I observed that several formats were used to signify null values within the same dataset (e.g., '\N', 'N'). I treated all of these as null values.
  - 25.2. **Datetime Formatting:** I converted all datetime values, identified by the presence of the word "timestamp" or "time" in the field, to datetime format, with the exception of the following fields, because they did not include a time value in them:

[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]

<sup>42</sup> See for example: 2100, 0

<sup>43</sup> See for example: 10007\_\*\*\_1\_\*\*\_0\_\*\*\_10740\_\*\*\_2\_\*\*\_675227027,

10007\_\*\*\_1\_\*\*\_0\_\*\*\_10740\_\*\*\_1\_\*\*\_71232,

10007\_\*\*\_1\_\*\*\_0\_\*\*\_10740\_\*\*\_3\_\*\*\_142870478\_\*\*\_10941\_\*\*\_1\_\*\*\_5838426

<sup>44</sup> See for example: 2100, 0

<sup>45</sup> See for example: 3180, 1800, 2160

25.3. **UUID Field Dash Standardization (i.e., “-”):** Uber produced some of its data files with dashes in the UUID fields (e.g., [REDACTED]), while omitting those dashes in other files. When the files were produced with dashes, I uploaded two versions of the files to “Bucket 2” and the AWS Redshift SQL database: one with dashes and one without. I utilized the version without dashes in my analysis.

25.4. **Unique Identifiers:** I extracted unique identifiers pertaining to drivers and riders, following the instructions from Katherine McDonald.<sup>46</sup> I extracted:

[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]

25.5. **Data Provenance Fields:** I added three fields to assist with data provenance:

- 25.5.1. “filename”: includes the original name of the file as it was produced by Uber
- 25.5.2. “load\_user”: identifies which user loaded the table
- 25.5.3. “load\_date”: identifies the date the file was uploaded

#### Plaintiff Trip and Driver Timeline Data (script: Driver\_Profiles\_BW.ipynb)

26. Uber produced Driver Trips,<sup>51</sup> Driver Communications,<sup>52</sup> S-RAD Inputs and Scores,<sup>53</sup> and Onboarding/Status Files<sup>54</sup> relating to the Plaintiff Bellwether trips outside of the AWS Secure Environment “Bucket 1.” I copied the contents of

those files onto the AWS Secure Environment by uploading them to the “Bucket 2” ingress using the web-based upload feature in the Amazon Console.

27. I first loaded all the Driver Trips data for all the Plaintiff Drivers into one table, where matching fields were placed under one another. I then filtered the Driver Trips data to completed trips by including only rows where “Status” is “completed.”
28. I added five fields to the Driver Trips data:
  - 28.1. “**begin\_trip\_hour**”: The hour that each trip began, derived from the field native to the dataset [REDACTED]
  - 28.2. “**day\_of\_week**”: The day of week for each trip, derived from the field native to the dataset [REDACTED]
  - 28.3. “**year**”: The year that each trip occurred, derived from the field native to the dataset [REDACTED]
  - 28.4. “**unique\_id**”: A unique identifier for each row in the data based on the order that the data appeared in the table, sorted by [REDACTED]
  - 28.5. “**day\_time\_category**”: segmented the hours of operation into four categories: Weekend Late Night Hours, Weekday Late Night Hours, Weekend Non-Late Night Hours, and Weekday Non-Late Night Hours.<sup>55</sup>
    - 28.5.1. **Weekend Late Night Hours**: Friday, Saturday, Sunday from 12 AM through 4:59 AM.
    - 28.5.2. **Weekday Late Night Hours**: Monday, Tuesday, Wednesday, Thursday from 12 AM through 4:59 AM.
    - 28.5.3. **Weekend Non-Late Night Hours**: Friday, Saturday, Sunday from 5:00 AM through 11:59 AM.
    - 28.5.4. **Weekday Non-Late Night Hours**: Monday, Tuesday, Wednesday, Thursday from 5:00 AM through 11:59 AM.
29. I created timeline tables for each driver, where one line in the data represented one event for that driver. From the Driver Trips data, I used the request, begin, and dropoff events with the associated status, ratings, and feedback. From the Driver Communications data, I used inbound and outbound message events showing the medium and content. From the -RAD Inputs and Scores, I used

<sup>55</sup> Deposition of Sunny Wong, 07/23/2025, 29:10-22; Deposition of Sunny Wong, 07/23/2025, 30:12-15

S-RAD files for job-level scores and thresholds. From the Onboarding/Status Files I used status and flow information.

30. To this timeline table, I added Bliss Messages, BlissActions, Jira Tickets, Jira Comments, and Interrogatory No. 16/29 Addendum, filtered for records containing the [REDACTED] or [REDACTED] associated with the Plaintiff's trips. Where date fields were present without a time component, I assigned a default of 12:00:00 local time to maintain chronological ordering. The final driver profile tables combined all events into unified chronological timelines and were exported both as individual CSVs for each driver and in Keller Report - Appendix D1.

## Step 2: Data Validation

31. For all files, I started with the standard steps of identifying the size and shape of each file, inspecting the records for missing information (e.g., months, records), and confirmed that fields contained the types of values that would reasonably be expected (e.g., that dates were valid calendar dates).

## Bliss/Jira Incident Report Classification Data and Flack Incident Report Classification Data

32. I compared the Bliss/Jira Incident Report Classification Data to the Flack Incident Report Classification Data. There were discrepancies between the counts Uber provided for at least one Subcategory within each monthly Incident Subcategory and for the "Total # of Unique Rides Trips [sic] with a Reported Incident," which I understand to be due to duplication. The "Total # of Unique Rides Trips [sic] with a Reported Incident" had identical values for each month in both the Bliss/Jira Incident Report Classification Data and the Flack Incident Report Classification Data.
33. I compared the completed trip volume in this dataset against the Weekday/Weekend Trip Volume per State per Year, 2012-2024<sup>56</sup> and found them to be within 1% of one another.

## Interrogatory No. 28

34. I validated the 12,522 [REDACTED] values in the first response against the SA/SM Incident Data and found all to be present.
35. I generally found that the data in the "Refunds [REDACTED] [REDACTED]" to contain numerical data as expected; however,

---

<sup>56</sup> Gaddis Exhibit 1574

there were some records with data that raised questions, for example, negative values as well as null or zero values in these fields.<sup>57</sup>

### Interrogatory No. 16/29 and Interrogatory No. 16/29 Addendum

36. I validated the 207,058 Driver UUID values in the first response against the supplemental response of 40,976 Drivers. All 40,976 drivers in the supplemental response were in the 207,058 response.
37. I also compared the Driver UUID values found in Interrogatory No. 16/29 to Driver UUID values found in the SA/SM Incident Data and found no discrepancies.

### SA/SM Incident Data

38. I compared the SA/SM Incident Data fields and confirmed that I had all the fields that were in the Data Dictionaries.
39. I read in the raw files produced by Uber, and for each field, I counted the number of lines of each value in the field. This allowed me to not only preview the types of data inside the data but also understand the contents of the field. For each field, I also created an output that showed the minimum, average, and maximum values for the values within that field to assist with this review.
40. I examined the data for duplication. The Jira Ticket table had only one "██████████" that was duplicated. Jira Comments, Bliss Messages, and Bliss Actions has significant duplication due to the communication nature of the tables.
41. I reviewed the data for missingness and null values. Within each table, I looked at the number of records and the percentage of records that were missing. I did this analysis across the entire table, also looking by year to look for potential trends in missingness. I identified some missingness in the data, for example:<sup>58</sup>

---

<sup>57</sup> Those questions were not fully addressed by Uber, including in Uber's June 3, 2025 Defs' Responses to ROG 28 Questions." Therefore, I did not use this data beyond confirming that the number of trips it included match the number of SA/SM Incidents Uber reported in its U.S. Safety Reports. There are analyses pertinent to my opinions that I could perform but, as described in my report, it is more appropriate to conduct my analyses on data that is as complete and accurate as possible. I reserve the right to supplement my analyses pending the outcome of the request for data from Flack, whether or not the additional data is produced.

<sup>58</sup> This is not intended to be a complete, comprehensive list of every instance of missingness or inconsistency within the data.

- 41.1. **Before 2017 and after 2022 or Missing Timestamps:**<sup>59</sup> data included trips whose [REDACTED] appeared to be prior to 2017 or after 2022. The data also included trips where there was data missing from the [REDACTED] [REDACTED].<sup>60</sup>
- 41.2. **Outside the United States, Ambiguous Location, or Missing Location:**<sup>61</sup> The data included trips whose "[REDACTED]" or "[REDACTED]" field<sup>62</sup> listed a location outside of the United States or did not provide sufficient information to confirm that the incident occurred within the United States. There were also trips that apparently occurred in the United States but were missing information sufficient to determine the time zone where the trip occurred.<sup>63</sup>
- 41.3. **Not a Sexual Assault or Sexual Misconduct Report:** The data included trips where the [REDACTED] was listed as something other than Sexual Assault or Sexual Misconduct or where no information was provided in the [REDACTED] field.
- 41.4. **Missing Trip UUID:** The data included trips where the [REDACTED] was missing and only [REDACTED] was available.
- 41.5. **Conflicting Information:** The data included some trips where, for the same trip, there was conflicting information between the Bliss and Jira systems about the [REDACTED].
- 41.6. **Party Reported Against:** The data included trips where it was ambiguous who the party was reported against for a particular trip or ticket, according to the [REDACTED] field that Uber provided.<sup>64</sup>

<sup>59</sup> According to Uber, the data was intended to be confined to incidents on trips that occurred between January 1, 2017 and December 31, 2022.

<sup>60</sup> Gaddis 07/11/2025 page 210 line 12; McDonald 04/2X/2025 at 120

<sup>61</sup> According to Uber, the data was intended to be confined to incidents on trips that occurred in the United States.

<sup>64</sup> Uber represented that Bliss and Jira do not have a field that indicates whether the incident was reported against the rider, driver, or another party, for example, in the March. 24, 2025 Field Convenience Description List. To determine the party reported against, Uber instructed to use a field Uber created and populated when it produced the data (the [REDACTED] field) (Email from Jay Haider on February 1, 2025. However, I noted conflict between the data in the [REDACTED] field and Uber's representations versus other related fields in the Bliss and Jira data.

42. I understand that data may still be produced, including data and fields from the Flack system that may assist me in de-duplicating these records and resolve missingness and inconsistencies, for more accurate processing and analysis of this dataset. For example, Flack includes fields that [REDACTED]

Additionally, Flack appears to include information about Uber's auditing of the tickets, which, according to Uber and affirmed by the data that was produced to me, was not maintained in a queryable field in Bliss or Jira.

### Plaintiff Trip and Driver Timeline Data

43. I checked that all expected columns were present and populated for each Plaintiff Driver [REDACTED]
44. Driver Trips,<sup>65</sup> Driver Communications,<sup>66</sup> S-RAD Inputs and Scores,<sup>67</sup> and Onboarding/Status Files<sup>68</sup>
45. I cross-checked the final combined timeline table against the original data sources. I sampled records from the timeline table and confirmed that each event, Driver Trips, Driver Communications, S-RAD Inputs and Scores, Onboarding/Status Files, Bliss Messages, Bliss Actions, Jira Tickets, Jira Comments, Interrogatory No. 16/29 and Interrogatory No. 16/29 Addendum, matched the corresponding entries in the raw files and the AWS Redshift SQL database tables. Finally, I confirmed that the number of records per driver aligned with the sum of events in the original sources.

### Step 3: Descriptive Analytics & Visualization

46. For this step, I relied on the reporting scripts to conduct data analysis and generate descriptive analytics. The script systematically produced cross-tabulations and visualizations that highlighted trends and patterns in the data.

### **Interrogatory No. 28**

47. I did not do additional analysis on this dataset. Due to the noted gaps and inconsistencies in this data as previously described, I reserve the right to supplement my analyses pending the outcome of the request, whether or not the additional data is produced.

### **Interrogatory No. 16/29 and Interrogatory No. 16/29 Addendum**

48. I did not do additional analysis on this dataset in the Secure AWS Environment. Due to the noted gaps and inconsistencies in this data as previously described, I reserve the right to supplement my analyses pending the outcome of the request, whether or not the additional data is produced.

### **Bliss/Jira Incident Report Classification Data and Flack Incident Report Classification Data**

49. For the Bliss/Jira Incident Report Classification Data, I aggregated the “Total # of Unique Rides Trips [sic] with a Reported Incident” to the month and again to the year to provide monthly and annual totals.
50. For the Flack Incident Report Classification Data, which was deduplicated, I aggregate the data to the month and again to the year to provide monthly and annual totals. I verified that my totals matched the “Total # of Unique Rides Trips with a Reported SA/SM Incident Based on the Dominant Ticket.”
51. The results of my analyses are shown in my report and the code has been disclosed in the script Main\_Report.ipynb.

### **SA/SM Incident Data**

52. I did not do additional analysis on this dataset. There are analyses pertinent to my opinions that I could perform and, as described in my report, it is more appropriate to conduct my analyses on data that is as complete and accurate as possible. I reserve the right to supplement my analyses pending the outcome of the request for data from Flack, whether or not the additional data is produced.

### **Plaintiff Trip and Driver Timeline Data**

53. For the driver profiles, I analyzed trip prevalence on specific days of the week and times of day, driver ratings, and the frequency of car idle nudges.

54. The results of my analyses are shown in my report and the code has been disclosed in the script `Driver_Profiles_BW.ipynb`.

#### Step 4: Automation

55. All of my steps for all datasets are fully automated, streamlining data handling and analysis throughout the entire workflow and allowing for reproducibility. The code that I used aligns to the core tenets of Data Science.
56. All SQL and Python scripts were written with clear comments and organization, supported by a README file that outlines the order in which scripts should be executed. This approach not only automates routine processes such as data cleaning, transformation, and aggregation but also guarantees that analyses can be reproduced consistently across environments and data volumes. By combining automation with documentation, including specifically this Methodology, I provide a clear account of how conclusions were reached that enables replication.
57. For Defendants' convenience, I have disclosed through "Bucket 4" the code underlying the analyses in my report and associated data that I or my team uploaded into the "Bucket 2" ingress. These offloads are timestamped and cannot be deleted by Plaintiffs. Pursuant to the agreement between Uber and Plaintiffs' Counsel, I am not re-producing data that Uber had uploaded in "Bucket 1" back to Uber through "Bucket 4," including the SA/SM Incident Data, Interrogatory No. 28, Interrogatory No. 16/29, and Interrogatory No. 16/29 Addendum.

#### IV. Document Review

58. I also reviewed documents provided via Everlaw, including depositions, exhibits, and internal Uber documents. I identified relevant documents by searching the platform for terms that applied to the data I analyzed or to specific Bellwether Plaintiff trips, including for the purposes of Driver Profiles (see Keller Report - Appendix D). The search terms that I used originated from deposition testimony, exhibit references, or documents that related to the data I analyzed. This process allowed me to connect the data produced with records describing how that was generated and used by Uber. I gave the greatest consideration to materials that were consistent with both deposition testimony and findings from analyses. At times, I was also provided documents by Plaintiff's Counsel, including documents produced in relation to the five Bellwether Plaintiff Drivers. The Bates numbers for all documents that I reviewed are included in Keller Report - Appendix G.

## **V. Maintenance of Standards and Controls**

59. I took multiple steps to confirm that my analyses in this matter were accurate, reproducible, and consistent with the underlying data and documentation. I validated key data Transformations with targeted queries that could be independently reproduced. I cross-checked outputs against the source data and metadata to confirm that counts, distributions, and field mappings were consistent. As part of my checks:
- 59.1. For each file that I moved from “Bucket 2” to the AWS Redshift SQL database, I confirmed that the length of the original file was the length of the file that was uploaded to the AWS Redshift SQL database.
  - 59.2. When loading the data into the AWS Redshift SQL database, I confirmed that the original count of records matched the loaded count.
  - 59.3. Checked for explosions in the data for unexpected surges in counts or duplicated records that would suggest errors in joins or transformations.
  - 59.4. Performed spot checks and sampling of individual records to verify that the raw data corresponded correctly to the processed results.
60. These quality-control measures reflect standard best practices I apply in all of my expert analyses and provide confidence that my findings are based on accurate and reliable data.

## **VI. Known or Potential Rate of Error**

61. The analyses in this report are based on straightforward counting and summing of records. As such, the potential rate of error is limited to the issues identified in the Validation section above, which are largely de minimis or do not impact my analysis because I do not rely on those fields. The results reflect the true volumes of records as produced. Importantly, no extrapolation, statistical modeling, or sampling was conducted in this matter. All outputs are direct tabulations from the Final Summary Table and are therefore reproducible by re-running the same queries.

## **VII. Objectivity of Analysis and Assumptions**

62. My analysis is based on industry-standard, replicable methods and techniques. I wrote all queries and analyses to yield unbiased, objective results. I fully disclosed all data and documents produced by Defendants and provided to me in

this matter. I employed these measures to ensure that my analysis is free from subjectivity and is reproducible and transparent. I assumed for my analysis that the data and documents produced by Uber were truthful and accurate as represented.

--	---------------------------------------

**Expert Report of Lacey R. Keller  
Appendix B - Definitions**

Dated: September 26, 2025

*Confidential and Subject to Protective Order*

1. **Bellwether Plaintiffs:** I use this term to refer to the Plaintiffs in this matter at the time of this report who reported the SA/SM Incidents against the Uber Drivers detailed in Keller Report - Appendix D.
2. **COVID:** This term refers to the “Global Pandemic” declared by the World Health Organization on March 11th, 2020 through May 5th, 2023, referring to an outbreak of the infectious disease Coronavirus 2019 (colloquially known as COVID).<sup>1</sup>
3. **Incident Category:** This term refers to either “Sexual Assault,” “Sexual Misconduct,” or both, as defined in Uber’s U.S. Safety Report 2021-2022 Appendix I:<sup>2</sup>
  - 3.1. **Sexual Assault (“SA”):** Uber uses this term to refer to “any physical or attempted physical contact that is reported to be sexual in nature and without consent. This can include incidents within the taxonomy ranging from attempted touching of a non-sexual body part (for example, a user trying to touch a person’s shoulder in a sexual/romantic way) to non-consensual sexual penetration.”<sup>3</sup>
  - 3.2. **Sexual Misconduct (“SM”):** Uber uses this term to refer to “non-physical conduct (verbal or staring) of a sexual nature that happens without consent or has the effect of threatening or intimidating the person against whom such conduct is directed. This can include incidents within the taxonomy ranging from staring/leering to verbal threat of sexual assault.”<sup>4</sup>
  - 3.3. **“SA/SM”:** Uber uses this abbreviation to refer to Sexual Assault and Sexual Misconduct, an overarching categorization that includes all Sexual Assault and Sexual Misconduct Incidents. “SA/SM” is used in this report consistent with Uber’s use of the term.
4. **Incident Subcategory or Subcategory:** Uber’s U.S. Safety Report 2017-2018 Appendix IV and 2019-2020 Appendix III defines the following 21 subcategories of Sexual Assault and Sexual Misconduct reports,<sup>5</sup> also known as the “taxonomy.”<sup>6</sup>
  - 4.1. **Attempted Kissing of a Non-Sexual Body Part:** Someone attempted to kiss, lick, or bite, but did not come into contact with, any non-sexual body part (hand, leg, thigh) of the user, and the user perceived the attempt to be sexual.

<sup>1</sup> “Coronavirus disease (COVID-19) pandemic”, World Health Organization, <https://www.who.int/europe/emergencies/situations/covid-19>.

- 4.2. **Attempted Kissing of a Sexual Body Part:** Someone attempted to kiss, lick, or bite, but did not come into contact with the mouth, breast(s), buttock(s), or genitalia of the user, and the user perceived the attempt to be sexual.
- 4.3. **Attempted Non-Consensual Sexual Penetration (“Attempted Rape”):** Without explicit consent from a user, someone attempted to penetrate the vagina or anus of a user with any body part or object. Any attempted removal of another person’s clothing to attempt to access a sexual body part will be classified as Attempted Non-Consensual Sexual Penetration. This also includes attempted penetration of the user’s mouth with a sexual organ or sexual body part; however, it excludes kissing with tongue or attempts to kiss with tongue.
- 4.4. **Attempted Touching of a Non-Sexual Body Part:** Someone attempted to touch, but did not come into contact with, any non-sexual body part (hand, leg, thigh) of the user, and the user perceived the attempt to be sexual.
- 4.5. **Attempted Touching of a Sexual Body Part:** Someone attempted to touch, but did not come into contact with, any sexual body part (mouth, breast(s), buttock(s), or genitalia) of the user, and the user perceived the attempt to be sexual.
- 4.6. **Comments or Gestures - Asking Personal Questions:** Someone asks specific, probing, and personal questions of the user. This would include questions about the user’s personal life, home address, contact information (e.g., phone, email, social media), romantic or sexual preferences.
- 4.7. **Comments or Gestures - Comments About Appearance:** Someone makes uncomfortable comments on the user’s appearance. This includes both disparaging and complimentary comments.
- 4.8. **Comments or Gestures - Explicit Comments:** Someone described or represented sexual activity or body parts in a graphic fashion.
- 4.9. **Comments or Gestures - Explicit Gestures:** Someone made sexually suggestive gestures at the user.
- 4.10. **Comments or Gestures - Flirting:** Someone makes verbally suggestive comments to the user about engaging in romantic or non-romantic activities. This also includes non-verbal, suggestive flirting, including becoming physically close to a person in a way the user felt was sexual or flirtatious.
- 4.11. **Displaying Indecent Material:** Indecent material, including pornography or other sexual images, was seen by the user.

- 4.12. **Indecent Photography/Video Without Consent:** Someone has taken, without consent, an inappropriate photograph of a user's sexual body part (e.g., down shirt, up skirt, etc.).
- 4.13. **Masturbation/Indecent Exposure:** Someone has exposed genitalia and/or is engaging in sexual acts in the presence of a user. This excludes public urination where no sexual body part (buttock, penis, breast) was exposed.<sup>7</sup>
- 4.14. **Non-Consensual Sexual Penetration ("Rape"):** Without explicit consent from a user, someone penetrated, no matter how slight, the vagina or anus of a user with any body part or object. This includes penetration of the user's mouth with a sexual organ or sexual body part. This excludes kissing with tongue.
- 4.15. **Non-Consensual Kissing of a Sexual Body Part:** Without consent from the user, someone kissed or forced a kiss on either the breast or buttocks of the user. This would include kissing on the lips or kissing while using tongue.
- 4.16. **Non-Consensual Kissing of a Non-Sexual Body Part:** Without consent from the user, someone kissed, licked, or bit, or forced a kiss, lick, or bite on any non-sexual body part (hand, leg, thigh) of the user.
- 4.17. **Non-Consensual Touching of a Sexual Body Part:** Without explicit consent from the user, someone touched or forced a touch on any sexual body part (breast, genitalia, mouth, buttocks) of the user.
- 4.18. **Non-Consensual Touching of a Non-Sexual Body Part:** Without explicit consent from the user, someone touched or forced a touch on any non-sexual body part (hand, leg, thigh) of the user.
- 4.19. **Staring or Leering:** Someone gazes at a user in an unpleasant, uncomfortable, prolonged, or sexual manner. Staring or leering is constant and unwavering. This includes viewing both sexual and non-sexual body parts.
- 4.20. **Soliciting a Sexual Act:** Someone directly asks for a kiss, displays of nudity, sex, or contact with a sexual body part (breast, buttock, genitals). This could be a direct solicitation or a solicitation in exchange for money or favors.
- 4.21. **Verbal Threat of Sexual Assault:** Someone directed verbal explicit/direct threats of sexual violence at a user.

5. Uber categorizes some SA/SM Incidents as “Insufficient Information” or “Parent Category Use Tracking” in the “Incident Subcategory” field in Uber’s U.S. Safety Reports. As used herein, these terms mean:
  - 5.1.1. **Insufficient Information:** SA/SM Incidents reports for which Uber did not have enough details to classify the incident.<sup>8</sup>
  - 5.1.2. **Parent Category Use Tracking:** SA/SM Incidents that are categorized only as “Sexual Assault” or “Sexual Misconduct” but not further categorized into a subcategory.<sup>9</sup>
6. **Opposite Gender Pairings:** I use this term to refer to Uber matches where the Driver gender was male and the Rider gender was female, or the inverse (Driver gender was female and Rider gender was male).
7. **Publicly-Disclosed Five:** I use this term to refer to the five categories of SA/SM Incidents that Uber included in Uber’s U.S. Safety Reports. Those categories are:
  - 7.1. Sexual Assault: Non-Consensual Sexual Penetration
  - 7.2. Sexual Assault: Non-Consensual Kissing - Sexual Body Part
  - 7.3. Sexual Assault: Non-Consensual Touching - Sexual Body Part
  - 7.4. Sexual Assault: Attempted Non-Consensual Sexual Penetration
  - 7.5. Sexual Assault: Non-Consensual Kissing - Non-Sexual Body Part
8. **Sexual Assault and Sexual Misconduct Incidents or SA/SM Incidents:** I use these terms interchangeably to refer an Uber-related incident report of an unwanted sexual experience (as defined by Uber in its U.S. Safety Report 2017-2018, pp. 15-16). Every time I refer to SA/SM Incidents, I am only referring to SA/SM Incidents that Uber represented were reported in the United States.
9. **Third Parties:** I use this term to refer to any individual who may have reported an SA/SM Incident to Uber but who was not necessarily involved in the SA/SM Incident.<sup>10</sup>
10. **User:** I use this term to refer to a person who interacts with the Uber platform as a Driver or a Rider.
11. **Weekend Late Night:** I use this term to refer to Friday from 12 A.M. to 4:59 AM, Saturday from 12 A.M. to 4:59 A.M., and Sunday from 12 A.M. to 4:59 A.M.<sup>11</sup>

**Appendix C - Qualifications and Remuneration**

Dated: September 26, 2025

*Confidential and Subject to Protective Order*

**Table of Contents**

**Table of Contents.....2**

**I. Qualifications.....3**

    I. Deposition and Trial Testimony.....6

**II. Speaking Engagements and Publications..... 9**

## I. Qualifications

1. I am the co-owner of MK Analytics, Inc. (MKA), a firm I co-founded with Meredith McCarron in 2021. MKA specializes in creating tailored platforms and reports that integrate disparate data and provide actionable insights for clients in the not-for-profit, government, and private sectors. MKA has established itself as a trusted partner for nationally known non-profit organizations, the United States federal government, several state attorneys general, local government, and some of the country's largest plaintiffs' law firms.
2. I am an Adjunct Professor at Washburn University School of Business in the data science department, where I co-teach the capstone project course and solo lecturer for the introductory course to data information systems, analysis, and database management.
3. Prior to founding MK Analytics, I was the Managing Director for Data Mining & Analytics with Gryphon Strategies, Inc. I was hired to create and direct their data mining and analytics division. This division advised financial and law firms on leveraging data for investments and investigations.
4. Prior to founding Gryphon Strategies' Data Mining & Analytics division, I founded and directed the Research and Analytics Department for the New York State Office of the Attorney General (NYS OAG) from 2013 to 2017. As a result of my leadership, the NYS OAG became the first state office attorney general to hire a data scientist. I grew my staff from one research assistant to seven full-time staff.
5. I have also worked in various research and analytical positions, including the research department of the Service Employees International Union (SEIU) 32BJ, the largest property services union in the country. I was also a researcher for the Global Clearinghouse and a Teaching Assistant at the New School for Social Research. As a consultant, I have been hired by and have provided pro-bono assistance to many state and federal agencies as well as nonprofits on the use of data mining and analytics in investigations.
6. The work I have done throughout my career relates directly to the analysis undertaken in this report. Specifically, I have developed a specialty in compiling and analyzing disorganized and disparate data. My work over the past 15 years has required me to extract, process, clean, merge, and analyze both public and confidential data, which often comes poorly formatted and from disparate locations. From these convoluted datasets, I have identified trends and outliers that have furthered investigations or prosecutions.
7. Since 2019, I have served as an expert witness in data mining and analytics for the National Prescription Opiate Litigation and related trials, providing comprehensive analyses on annual, geographic, and market trends, identifying outlier activities, and implementing compliance metrics and red flags. With 20 depositions and six trial

testimonies in this litigation, my expertise was never limited or excluded. The analyses I provided in these matters drew upon my unique and specialized skill set that has been developed over a decade of research and analytical experience.

8. I was often tasked with identifying instances of wrongdoing by companies. For example, while at SEIU 32BJ, I reviewed public records for data to identify wrongdoing by cleaning companies and cleaning contractors around the country. Through thorough research and documentation, I was able to identify a cleaning company that was creating shell companies to keep a small business cleaning contract at the Walter Reed Medical Center. SEIU 32BJ submitted this information to the General Services Administration. To the best of my knowledge, that company or its subsidiaries/affiliates lost the contract for that site.
9. My primary directive when the NYS OAG hired me was to help the office identify areas for investigation using data. I often would use public data to assist with these investigations. For instance, I combined publicly available tax assessor, mortgage records, and real estate listings to identify hundreds of landowners potentially out of compliance with the city's 421-a tax benefit program that the NYS OAG investigated resulting in hundreds of thousands of dollars in settlements with landlords.
10. My work over the past 15 years has required me to extract, process, clean, merge, and analyze both public and confidential data, which often comes poorly formatted and from disparate locations. From these convoluted datasets, I have identified trends and outliers that have furthered investigations or prosecutions.
11. While at the NYS OAG, I developed and managed the Community Overdose Prevention (COP) Program to use data analytics to determine how best to deploy life-saving naloxone across law enforcement officers statewide. Under that program, I oversaw the collection of information related to naloxone disbursements, which jumpstarted tracking opioid overdoses more efficiently throughout the state. I used the data I collected, as well as external datasets, to deepen my understanding of opioid usage in New York State.
12. I have written or co-authored numerous public-facing reports using my data analysis to advance a variety of investigations into illegal activity, many of which have been covered by national media outlets. For instance, my analysis published in a report issued by the NYS OAG helped reveal Airbnb's illegal activity in New York City.<sup>1</sup> In addition, while at SEIU 32BJ, I authored two papers about the physical building conditions of New York City public school facilities,<sup>2</sup> the second of which was widely covered by local news and prompted a city council oversight hearing to address the issues raised.
13. In my work, I have frequently received productions of data in a format not initially conducive to analysis, such as productions containing PDF versions of spreadsheets or thousands of files of various formats. In a case that settled for hundreds of millions of dollars, I supervised the team that identified and extracted information about shipments

<sup>1</sup> [https://ag.ny.gov/sites/default/files/reports/AIRBNB\\_REPORT.pdf](https://ag.ny.gov/sites/default/files/reports/AIRBNB_REPORT.pdf)

<sup>2</sup> <https://assets1.cbsnewsstatic.com/i/cbslocal/wp-content/uploads/sites/14578484/2013/05/falling-further-apart1.pdf>

from the distributors' production in that case. Because of this analysis, my team and I were able to detect millions of improper shipments made in New York State that were then used by NYS OAG attorneys in court and ultimately led to the judge ordering the defendant in that case to pay almost \$250 million in damages.

14. My experience also includes processing very disorganized data produced by defendants in various cases for investigations and prosecution. For a wage theft case brought by the NYS OAG, I was asked to identify instances of an employer "stealing time" from employees. To complete this analysis, I had to extract information from thousands of PDF employee timecards to extrapolate and identify instances of missing time. Based on my analysis, I determined that over \$500,000 was owed to employees.
15. In my work, I supervise complicated data management and analysis. For an NYS OAG investigation into posting fake trades in emerging market foreign exchange currency options, I used scripts to extract relevant trade information from two years of instant message, email, and voice communications between brokers. Working with my team, I then compared the relevant information from postings to the trade confirmations of completed trades brokered to determine which trades were real and which were fabricated. This analysis was relied upon to generate a criminal complaint filed by the NYS OAG. The firms ultimately pled guilty to one count of securities fraud.
16. I am also experienced in working with vast amounts of sensitive information. In developing the interactive dashboard on illegal gun trafficking in New York, the NYS OAG obtained the anonymized and highly confidential firearms tracing data from the Bureau of Alcohol, Tobacco, Firearms and Explosives. My team and I were authorized by dozens of police departments to access their firearms trace data. I transformed that data into an interactive tool used by New York State law enforcement agencies to identify potential firearms trafficking based on relevant analytics. This data required considerable cleaning and analysis, including geocoding and entity resolution to identify the same firearm purchaser that relied on different aliases, addresses, and other biographical information to avoid detection. The publication of the dashboard and report "Target on Trafficking: New York Crime Gun Analysis" earned a front-page feature in the New York Daily News and was later cited by the Journal of Urban Health, Data-Smart City Solutions, the American Medical Association, and the Rockefeller Institute.
17. I am frequently called upon to analyze very large data. While working on investigations of broadband internet investigations at the NYS OAG, I collected public speed test data and submissions to the Office made by the general public about the download speed. This preliminary analysis was the basis for opening an investigation into the practices of the largest broadband providers regarding the internet speeds of their customers. As part of this investigation, I drafted the data request to broadband providers for the account and other relevant information that would impact a customer's internet speed. I connected several datasets totaling hundreds of millions of records, including the customer account data (what internet tier they were provisioned), the internet speed test results, as well as information about the modem/router configuration. The results of my

analysis and the analysis that I supervised were used in the complaint the NYS OAG filed against Time Warner Cable. The case ultimately settled for \$174.2 million.

18. I have also been requested to develop dashboards that allow end-users to explore the data in their investigation or litigation. I developed an interactive dashboard as part of an expert report regarding contamination of the water systems serving members of the military and civilians living near the Red Hill Bulk Storage Facility in Honolulu, Hawaii. I also worked alongside and supervised the team that developed interactive maps that showed the fire progression against emergency response, road closures, public safety, telecommunications, and other relevant data over time to better understand the impact of a wildfire on a specific geographic area. I also developed and consulted on data integration and visualization tools for gun violence and firearm manufacturing for Everytown for Gun Safety, the country's largest gun violence prevention organization.
19. I received the NYS OAG's Innovation in Law Enforcement Award for my work on gun trafficking and twice received the NYS OAG's Superior Service Award.
20. I was a member of the 28th Class of Coro's Leadership New York and was part of City and State's 40 Under 40 Rising Stars in 2016.
21. I hold a Master of Arts in Economics from the New School and a Bachelor of Business Administration from Washburn University.

## I. Deposition and Trial Testimony

22. I have been deposed on the following matters:
  - 22.1. June 13, 2019, after filing an expert analysis with the Track One MDL 2804 Opiate Litigation.
  - 22.2. January 23, 2020, after filing an expert analysis for the Opioid Litigation, 400000/2017 Relating to Case Nos. County of Suffolk, 400001/2017; County of Nassau, 400008/2017; and New York State, 400016/2018.
  - 22.3. March 6, 2020, after filing an expert analysis for Staubus, et al, v. Purdue Pharma, L.P., et al, Case No. C-41916.

## EXPERIENCE

### Co-Owner and Founder

#### MK Analytics, Inc.

New York, NY (Feb. 2021 – Present)

### Managing Director

#### Gryphon Strategies

New York, NY (Nov. 2017 – Feb. 2021)

- Led the development of Gryphon Strategies' newest business offering - Data Mining & Analytics to support due diligence cases, fraud investigations, and litigation engagements.

### Director of Research & Analytics

#### New York State Office of the Attorney General

New York, NY (Oct. 2013 – Nov. 2017)

- Built the Attorney General's Research & Analytics department – growing from one research assistant to seven full-time staff – including making the New York Attorney General the first in the country to employ a data scientist. This team supports the office's major initiatives and investigations through open source intelligence research, big data analysis, and data science techniques.
- Managed the redesign and relaunch of the Attorney General's open data and transparency website, NYOpenGovernment.com.
- Co-developed the first-of-its-kind report and interactive dashboard on illegal gun trafficking in New York, which was the cover story of the Daily News.
- Provided analysis for the lawsuit against Spectrum-Time Warner Cable and Charter Communications for allegedly defrauding New Yorkers over internet speeds and performance, which was the cover story of the Daily News.
- Co-authored and provided the analysis for the report on illegal Airbnb rental activity in New York City, which was a cover story in the New York Times.
- Developed and managed two multi-million dollar programs that provided naloxone and bulletproof vests for New York State law enforcement.
- Presented at national conferences, local events, and office-wide trainings on using open source intelligence and data to support investigations.
- Cultivated partnerships with universities and technology start-ups to enhance the office's technological capacity, including projects to identify illegal drug dealers on social media, developing metrics to identify bad-actor landlords, and finding social media posts about consumer fraud by training a model based on complaints submitted to the office.

### Lead Researcher

#### Previous Positions: Research Analyst, Researcher, and Intern

#### Service Employees International Union 32BJ

New York, NY (Jun. 2010 – Oct. 2013)

- Led a team of researchers that supported the union's collective bargaining and new member organizing efforts in several major East Coast markets.
- Developed and executed strategic corporate campaigns by identifying appropriate tactics, relevant research, and necessary resources; significant wins include defeating Delaware's largest non-union janitorial contractor and unionizing janitorial companies at the National Naval Medical Center.
- Authored and managed the release of two papers about the conditions of New York City public school facilities, the second of which was widely covered by local news and prompted a city council oversight hearing.
- Developed union density analysis, market research, contract cost scenarios, and dossiers that included financial, legal, political, and other public information.

## I. Overview

1. I provide a summary of the Bellwether trips and Drivers in Table 1. Uber collected information on trips, Driver ratings, communications and push notifications, and SA/SM Incidents.
2. The tables and figures in each profile demonstrate the visibility that Uber had into patterns and trends in each Driver's activity, such as the day of the week/time of day that a Driver most frequently drove, including the percentage of a Driver's trips that occurred during weekends and late-night hours, which are time periods identified by Uber as potentially correlated with higher rates of SA/SM Incidents.<sup>1</sup>
3. I analyzed Driver rating (e.g., 1 to 5 Stars)<sup>2</sup> and the details of their Safety Incident History, including all reported SA/SM Incidents<sup>3</sup> – features which have been identified by Uber as potential “precursors”<sup>4</sup> of SA/SM Incidents. I was also requested by counsel to review “idle ride push notifications”<sup>5</sup> for each Driver.
  - 3.1. I conducted an analysis of Driver rating by time of day and day of the week. Uber has stated that, for a male Driver, “trends show he gets rated considerably lower (4\* or below) by female riders on late night pickups from entertainment districts, on Friday and Saturday nights.”<sup>6</sup> While Rider gender and trip location details for trips other than the Plaintiffs' were not included in the produced data, I examined whether any patterns emerged in which a Driver received lower ratings during specific periods, such as late night hours on weekends.
  - 3.2. I also reviewed idle ride push notifications received on Driver's trips, analyzing them by time of day and day of the week. I ran the same analysis on all Driver's communication logs with Uber, but not all Drivers in these examples received idle ride notifications. For those Driver profiles, I have included the blank table indicating no idle ride notifications were found in the data.
  - 3.3. Finally, I reviewed the details of each Driver's reported SA/SM Incidents, including the Plaintiff's trip.

<sup>5</sup> Counsel requested the following phrases to be analyzed: “Your ride's been stopped for a while. Please let us know if everything is OK.”, “Your ride's been stopped for a while. Is everything okay?”, “Your ride's been stopped for a while. Please let us know if everything is OK.”, “Your ride's been stopped for a while. Is everything okay?”, “Se detuvo el viaje por un momento. Infórmalos si todo está bien.”

4. For each Driver, I include a timeline that consolidates all structured data produced in this matter into a single chronological record, which is provided in Appendix D1. Where the data was available, the timeline shows all structured data events captured and produced by Uber, including trips, communications, raw data from the SA/SM Incident Data reports, S-RAD scores, onboarding records, and other events.
5. I have also included a folder containing the full set of materials produced by Uber associated with each Bellwether Driver's reported incidents in Keller Report - Appendix D2. The attachments and supporting materials I have considered for the Bellwether Drivers are consistent with the selection provided in my Report. For reference, the methodology for the selection of those materials is described in Keller Report - Appendix A.
6. The following table summarizes the key information for each Bellwether Driver profile.

## II. Profile: Hassan Turay

7. Hassan Turay was the driver of Plaintiff Dean's trip on November 15, 2023. Turay's Uber Investigations Workbench showed that he had a lifetime total of 11,117 trips. Of the trips Uber produced, a number were missing a local timestamp.<sup>87</sup> Therefore, I was able to analyze 9,769 trips<sup>88</sup> with Turay as Driver. Uber tracked when Turay was reported for Safety Incidents, including SA/SM Incidents. Turay had ten reported Safety Incidents, including three SA/SM Incidents: March 24, 2019 (Sexual Misconduct - Comments about Appearance), April 17, 2023 (Sexual Assault - Non-Consensual Kissing, classified "invalid" by Uber), and November 15, 2023 (Sexual Assault - Non-Consensual Penetration). According to Uber's own taxonomy, these incidents escalated in severity over time, with the final incident resulting in Turay's permanent deactivation as an Uber Driver. The supporting Safety Data and related case materials I considered for these SA/SM Incidents are included in the attached Appendices D1 and D2.

36. The following figure shows Le's profile on Uber's internal Investigations Workbench.

**Figure 21: Uber's Investigations Workbench Provides an Overview of Le's Activity, Including Whether He Has Been Banned or Rejected as Rider or Driver**  
(UBER-MDL3084-BW-00006398)

37. The following figure illustrates the total trips driven by day of the week and time of day. This data only considers trips where Begin Trip At Local is known and Status is “completed”. The day of the week is determined by the Begin Trip At Local timestamp. “Late night” is defined as 12 AM-4:59 AM.<sup>124</sup> “Weekend” is defined as Friday at 12:00 am to Sunday at 11:59pm.<sup>125</sup>

**Figure 22: Le’s Trips During Late-Night or Non-Late-Night Hours on Weekends and Weekdays (UBER-MDL3084-BW-00006265)**

<sup>124</sup> “Late night” is defined as 12 AM-4:59 AM (Deposition of Sunny Wong, 07/23/2025, 30:12-15).

<sup>125</sup> “Weekend” is defined as Friday at 12:00 am to Sunday at 11:59pm (Deposition of Sunny Wong, 07/23/2025, 29:10-22).

38. The following figure displays a visualization known as a “heat map” of the trip volume. This data only considers trips where “Begin Trip At Local” is known and the “Status” field is shown as “completed.”

**Figure 23: Percent of Le's Trips by Hour  
(UBER-MDL3084-BW-00006265)**

**B. Driver Ratings**

39. The following table shows the number of completed trips for driver Le with a 1, 2, 3, 4, and 5 star rating and the percent of each rating by time of day. Only trips with a known begin date and a submitted rating were considered. "Late night" is defined as 12 AM-4:59 AM.<sup>126</sup> "Weekend" is defined as Friday at 12:00 am to Sunday at 11:59pm.<sup>127</sup>

**Table 6: Le's Ratings (1 to 5 Stars) and When They Occurred  
(UBER-MDL3084-BW-00006265)**

Driver Rating	% Of Trips On Weekday Non-Late Night Hours	% Of Trips On Weekday Late Night Hours	% Of Trips On Weekend Non-Late Night Hours	% Of Trips On Weekend Late Night Hours	Total Rated Trips
1	41.67	8.33	41.67	8.33	12
2	0	0	50	50	2
3	40	30	30	0	10
4	40	6.67	40	13.33	15
5	36.38	14.95	32.62	16.05	2,100

<sup>126</sup> "Late night" is defined as 12 AM-4:59 AM (Deposition of Sunny Wong, 07/23/2025, 30:12-15).

<sup>127</sup> "Weekend" is defined as Friday at 12:00 am to Sunday at 11:59pm (Deposition of Sunny Wong, 07/23/2025, 29:10-22).

### C. Idle Ride Notifications

40. In the following figure, I show the volume of was directed by counsel to consider Idle Ride Notifications by time of day. Timezones were all converted to U.S./California. "Late night" is defined as 12 AM-4:59 AM.<sup>128</sup> "Weekend" is defined as Friday at 12:00 am to Sunday at 11:59pm.<sup>129</sup>

**Figure 24: Analysis of When Uber Sent Le Idle Ride Notifications (UBER-MDL3084-BW-00000032)**

<sup>128</sup> "Late night" is defined as 12 AM-4:59 AM (Deposition of Sunny Wong, 07/23/2025, 30:12-15).

<sup>129</sup> "Weekend" is defined as Friday at 12:00 am to Sunday at 11:59pm (Deposition of Sunny Wong, 07/23/2025, 29:10-22).

**D. Sexual Assault and Sexual Misconduct Incident History**

41. The following figure shows Uber's internal Incident History for Le.
